Linear-Fractional Programming Theory, Methods, Applications and Software E.B. Bajalinov, 2013-12-01 This is a book on Linear Fractional Programming here and in what follows we will refer to it as LFP The field of LFP largely developed

by Hungarian mathematician B Martos and his associates in the 1960 s is concerned with problems of optimization LFP problems deal with determining the best possible allocation of available resources to meet certain specifications In particular they may deal with situations where a number of resources such as people materials machines and land are available and are to be combined to yield several products In linear fractional programming the goal is to determine a permissible allocation of resources that will maximize or minimize some specific showing such as profit gained per unit of cost or cost of unit of product produced etc Strictly speaking linear fractional programming is a special case of the broader field of Mathematical Programming LFP deals with that class of mathematical programming problems in which the relations among the variables are linear the constraint relations i e the restrictions must be in linear form and the function to be optimized i e the objective function must be a ratio of two linear functions
