Proceedings of CIBv 2024
Ioan Tuns, Radu Muntean, Teofil Gălăţanu, Christiana Cazacu, Mircea Conţiu, 2025-06-23 This book gathers the proceedings of the 19th International Conference on Civil Engineering and Buildings Services CIBv held in Braşov Romania on November 7-8 2024 It covers highly diverse topics such as structural analysis and optimization concrete steel and timber structures

computer aided design of structures railways roads and bridges geotechnics and foundations experimental methods in the investigation of structures new and improved building materials risk assessment of natural hazards advanced energy design for HVAC installations energy performance of buildings and efficient buildings Written by leading researchers and engineers and selected by means of a rigorous international peer review process the contributions highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaborations Flood Damage Reduction Potential of River Forecast Services in the Connecticut River Basin Harold J. Day, Kwang K. Lee, 1976 Flood plain management has been a subject of special concern in the United States for the past two decades A river forecasting system is an integral part of a total flood plain management program It is particularly important in those activities associated with temporary evacuation and or floodproofing The flood warning system associated with a river forecast system can be one of the most cost effective alternatives for flood plain management This study examines flood damage reduction in four carefully selected communities in the Connecticut River Basin Using data from these communities a basin wide extrapolation could proceed to other flood prone communities in the basin Properties on the flood plain were classified into residential commercial industrial and automobile categories Stage damage assessments were made for those categories for four situations no warning NW limited warning time LWT maximum practical evacuation MPE and floodproofing of one story houses FP I The investigation found that approximately 750 000 of reducible damages can be expected on commercial and residential elements of the flood plain Although reducible damages associated with industrial structures were not evaluated elsewhere in the Nation such values often are of the same order of magnitude as residential and commercial Total basin wide reducible damages therefore undoubtedly exceed 1 500 000 per year The present annual cost to the National Weather Service of providing river forecasts throughout the basin is approximately 75 000 A total of 200 000 per year would be adequate to provide forecast services associated with reducible damages *Geospatial Techniques in Urban Hazard and Disaster Analysis* Pamela S. Showalter, Yongmei Lu, 2009-11-11 This book is the second in a series that examines how geographic information technologies GIT are being implemented to improve our understanding of a variety of hazard and disaster situations The main types of technologies covered under the umbrella of GIT as used in this volume are geographic information systems remote sensing not including ground penetrating or underwater systems and global positioning systems Our focus is on urban areas broadly defined in order to encompass rapidly growing and densely populated areas that may not be considered urban in the conventional sense The material presented here is also unabashedly applied our goal is to provide GIT tools to those seeking more efficient ways to respond to recover from mitigate prevent and or model hazard and disaster events in urban settings Therefore this book was created not only with our colleagues in the academic world in mind but also for hazards professionals and practitioners We also believe graduate students will find the material presented here of interest as may upper division undergraduate students **Damage tolerance in aircraft structures**, 1971
