Three Proofs for the Existence of God Uchemadu Chée Kamanu, 2020-12-24 Three Proofs for the Existence of God gives scientific historic and prophetic proofs for the existence of God If we do not think that a computer or even a bicycle could have come up by chance without a designer could we think that man who made the computer could have come up by chance without a designer Chance and design are mutually exclusive the disproof of the one is the proof of the other There is no third option In biogenesis genetics dendrochronology geophysics and thermodynamics evolution theory has been disproved experimentally and observationally By default therefore design has been proven Any attempt by evolutionists to experimentally disprove design or prove chance ends up proving design The one conducting the experiment is the designer of that experiment and the result is his design If the experiment is left to chance nothing happens With historic data from the Bible added up we show the year God created man and other things Acts and relationships between God and his creation show up in other chapters to remind us that the Creator God lives and wills One of these chapters Black History in Scripture disproves the saying that Christianity is the white man s religion We show that the scriptures were translated into three African languages for ten centuries before there was an English Bible among other facts Did Jesus not live in Israel and Africa only

Orbital Tumors Zeynel A. Karcioğlu, 2006-01-16 From the Preface About every ten years a new book appears on any given medical specialty subject Naturally this is not because the entire body of knowledge on that specialty is

overhauled every ten years but because the progress made over a decade usually warrants expressing new perspectives on quite a few diseases Orbital oncology certainly qualifies as a subspecialty that merits an update every decade At least two or three excellent textbooks on orbital tumors have been written since the mid 1980s This book reports advances in knowledge about orbital diseases and their treatment and offers an up to date single volume reference for orbital tumors with particular emphasis on new improvements in diagnostic and therapeutic measures Part I comprises advances in oncogenesis and its relationship to orbital tumors Changes in the biological behavior of diseases in the general patient population are much slower than technological advances nevertheless those alterations take place as well One of the major medical issues of our time for example is the changes in the immunological status of individuals This issue influences the entire field of medicine particularly oncology including the treatment of orbital tumors Chapters 2 to 5 summarize these influences Medical genetics gained momentum during the past two decades and now affects the clinical practice of almost every discipline of medicine including ophthalmology and orbitology Chapters on principles of molecular genetics and immunosurveillance mechanisms of neoplasia and on the occurrence of multiple malignant neoplasms in retinoblastoma have been included to apply molecular concepts to clinical practice related to orbital tumors Advances in one discipline often directly benefit practice in another field In orbitology no development has been more influential than the revolution in imaging techniques including ultrasonography computerized tomography and magnetic resonance methods Four chapters in Part II are devoted to the role of imaging in diagnosis of orbital tumors Other diagnostic advances entailing immunohistochemistry flow cytometry gene microarray and the polymerase chain reaction are summarized in a separate chapter on orbital biopsy
