Metalinguistic Performance and Interlinguistic Competence David Birdsong, 2012-12-06 It is often assumed that metalinguistic performance e.g. detection of ambiguity judgments of grammaticality straightforwardly reflects linguistic knowledge The inadequacies of such an assumption are explored in this volume which documents the subtleties of the relationship between metalinguistic performance and knowledge of a second language interlinguistic competence from the perspectives of language acquisition theory and cognitive and developmental psychology This thorough and up to date examination of metalinguistic phenomena offers insight to those involved in designing elicitation materials analyzing and interpreting metalinguistic performance data and applying such evidence to descriptions of interlanguage grammars and to second language acquisition theory The book also contributes constructively to the current debate concerning the role of metalinguistic variables in second language acquisition that is how they ultimately affect success or failure in learning a second language

Special Computer Architectures for Pattern Processing King-Sun Fu, 2018-05-04 It has been recognized for a long time that a conventional sequential processor is inefficient for operations on pictorial data where relatively simple operations need to be performed on a large number of data elements pixels Though many parallel processing architectures for picture processing have been proposed in the past very few have actually been implemented due to the costs involved With LSI technology it is becoming possible to realize parallel architectures at a modest cost In the following the authors review some of the proposed architectures for pattern recognition and image processing

NASA Reference Publication ,1977 **The Culture of Nature in the History of Design** Kjetil Fallan, 2019-03-26 The Culture of Nature in the History of Design confronts the dilemma caused by design's pertinent yet precarious position in environmental discourse through interdisciplinary conversations about the design of nature and the nature of design Demonstrating that the deep entanglements of design and nature have a deeper and broader history than contemporary discourse on sustainable design and ecological design might imply this book presents case studies ranging from the eighteenth to the twenty first century and from Singapore to Mexico It gathers scholarship on a broad

range of fields practices from urban planning landscape architecture and architecture to engineering design industrial design furniture design and graphic design From adobe architecture to the atomic bomb from the bonsai tree to Biosphere 2 from pesticides to photovoltaics from rust to recycling the culture of nature permeates the history of design As an activity and a profession always operating in the borderlands between human and non human environments design has always been part of the environmental problem whilst also being an indispensable part of the solution The book ventures into domains as diverse as design theory research pedagogy politics activism organizations exhibitions and fiction and trade literature to explore how design is constantly making and unmaking the environment and conversely how the environment is both making and unmaking design This book will be of great interest to a range of scholarly fields from design education and design history to environmental policy and environmental history **Fourth International Congress for Stereology** Ervin E.

Underwood,1976 *Syntactic Methods in Pattern Recognition* ,1974-11-15 In this book we study theoretical and practical aspects of computing methods for mathematical modelling of nonlinear systems A number of computing techniques are considered such as methods of operator approximation with any given accuracy operator interpolation techniques including a non Lagrange interpolation methods of system representation subject to constraints associated with concepts of causality memory and stationarity methods of system representation with an accuracy that is the best within a given class of models methods of covariance matrix estimation methods for low rank matrix approximations hybrid methods based on a combination of iterative procedures and best operator approximation and methods for information compression and filtering under condition that a filter model should satisfy restrictions associated with causality and different types of memory As a result the book represents a blend of new methods in general computational analysis and specific but also generic techniques for study of systems theory and its particular branches such as optimal filtering and information compression Best operator approximation Non Lagrange interpolation Generic Karhunen Loeve transform Generalised low rank matrix approximation Optimal data compression Optimal nonlinear filtering NBS Special Publication ,1976 **A Taxonomy of Visual**

Processes William R. Uttal,2014-06-27 Originally published in 1981 this third volume deals with the empirical data base and the theories concerning visual perception the set of mental responses to photic stimulation of the eyes As the book develops the plan was to present a general taxonomy of visual processes and phenomena It was hoped that such a general perspective would help to bring some order to the extensive but largely unorganized research literature dealing with our immediate perceptual responses to visual stimuli at the time The specific goal of this work was to provide a classification system that integrates and systematizes the data base of perceptual psychology into a comprehensive intellectual scheme by means of an eclectic multi level metatheory invoking several different kinds of explanation **Proceedings** ,1975 **Visual**

human perceivers As can be seen from the list of contributors the problems of vision engage the interest and experimental ingenuity of investigators from a variety of disciplines Thus we find authors affiliated with departments of biology medical and physiological physics ophthalmology physics physiology and anatomy psychology laboratories of neurophysiology medical clinics schools of optometry visual and other types of research institutes A continuing interplay between psychophysical studies and physiological work is everywhere evident As more information about the physiological basis of vision accumulates and new studies and analyses of receptor photochemistry and the neurophysiology of retina and brain appear psychophysical studies of the intact organism become more sharply focused sometimes more complex and often more specialized Technological advances have increased the variety and precision of the stimulus controls and advances in measurement techniques have reopened old problems and stimulated the investigation of new ones In some cases new concepts are being drawn in to help further our understanding of the laws by which the visual mechanism operates in other cases ideas enunciated long ago have been reevaluated developed more fully and reified in terms of converging evidence from both psychophysical experiments and unit recordings from visual cells

The Psychobiology of Sensory Coding William R. Uttal, 2014-06-27 Originally published in 1973 this book deals with what were even at that time the well known neural coding processes of the sensory transmission processes The book was written to demonstrate the common features of the various senses It concentrates on the most peripheral neural aspects of the senses starting with the physical transduction process and culminating in the arrival of signals at the brain

Digital Picture Processing Azriel Rosenfeld, 1976-01-01 Digital Picture Processing is a technique oriented book aiming to teach the more extensive treatments of digital pictures The book discusses picture processing the computer representation of pictures and the mathematical preliminaries involved The visual perception the digitization and the different techniques on sampling and different techniques on compression are also covered The book also explains the enhancement techniques such as sharpening and smoothing filtering techniques used in restoration and the geometry and description of a picture The text is recommended to students of electrical engineering and computer science who intend to learn better techniques in picture processing through digital means The book is also suitable as an advanced undergraduate or a graduate course in picture processing
