Practical Poetics in Architecture Leon van Schaik, 2015-04-29 Integrate poetics into real world spaces by bringing theory down to earth Practical Poetics in Architecture takes poetics out of the theory class and into the design studio showing architects how the

atmospheric and experiential qualities of built structures can be intentionally considered and planned With an emphasis on analysing and explaining the sensibility of poetics at work in designing and constructing architecture this book features projects from architects around the world that demonstrate the principles of poetics come to life The rich illustration of two hundred colour images including analytical diagrams plans sections and photos make this insightful guide a highly visual foray into a topic that has thus far remained more theoretical than practical The text is matter of fact and concrete yet remains richly connected to its forbears and the writings of William Lethaby Gaston Bachelard and Steen Eiler Rasmussen The perspective is contemporary in its examples and its connections to the evolving science of perception An established seminar topic in theory classes around the world poetics tends to rely heavily on classic philosophic texts until now Practical Poetics in Architecture brings theory down to earth to show architects how to invoke poetics when designing real projects Integrate poetics principles into real world designs Consider atmosphere in terms of form space and acoustics Study actual projects that bring poetics into real spaces Take cues from analytical diagrams of projects accounting for context Poetics the accumulated experience of place space and culture has become more critical in recent years as the atmospheric and experiential qualities of built spaces have become more elusive in the virtual age Practical Poetics in Architecture provides real guidance for real projects and brings poetics out of the mind and onto the plans

Software Engineering for Self-Adaptive Systems Betty H. C. Cheng, Rogério de Lemos, Paola Inverardi, Jeff Magee, 2009-06-10 Although the self adaptability of systems has been studied in a wide range of disciplines from biology to robotics only recently has the software engineering community recognized its key role in enabling the development of future software systems that are able to self adapt to changes that may occur in the system its requirements or the environment in which it is deployed The 12 carefully reviewed papers included in this state of the art survey originate from the International Seminar on Software Engineering for Self Adaptive Systems held in Dagstuhl Castle Germany in January 2008 They examine the current state of the art in the field describing a wide range of approaches coming from different strands of software engineering and present future challenges facing this ever resurgent and challenging field of research Also included in this book is an invited roadmap paper on the research challenges facing self adaptive systems

within the area of software engineering based on discussions at the Dagstuhl Seminar and put together by several of its participants The papers have been divided into topical sections on architecture based self adaptation context aware and model driven self adaptation and self healing These are preceded by three research roadmap papers **Liquid**

Architecture Pierangelo Marco Scragliari,2023-12-22 Liquid Architecture challenges the idea of architecture as a fixed inert container and reconceptualises it as a body whose boundaries are rather blurred and ever changing This book moves away from form as the primary driver of spatial protocols and explores what the built environment might look like when viewed through the lenses of a wet ontology that is attentive to fluidity flows and territorial dynamism A reconfiguration of architectural materials and authorship is thus considered leading in turn to an exploration of the ethical dimensions of co designing with natural systems of various viscosities through liquid paradigms The book examines a set of principles for practice led discoveries that incorporate hybrid mixed media with the author s intersubjective relationship with liquid matter Drawing from qualitative based analytical investigation models the text allows comprehension of the liquid phenomena via material contextualisation of an ever becoming research setting Through a practical and theoretical engagement with the ontology of liquids the reader is exposed to a range of design led experiments and creative propositions visualisation systems construction and testing of physical models that collectively translate into a series of novel insights for architectural agendas This book will be of interest to architecture and design research students and academics because it advocates the need for a more symbiotic and resilient approach to natural systems which could benefit from the integration of regenerating material flows into our buildings and urban settlements **Design Transactions** Bob Sheil ,Mette Ramsgaard Thomsen ,Martin

Tamke,Sean Hanna,2020 Design Transactions presents the outcome of new research to emerge from Innochain a consortium of six leading European architectural and engineering focused institutions and their industry partners The book presents new advances in digital design tooling that challenge established building cultures and systems It offers new sustainable and materially smart design solutions with a strong focus on changing the way the industry thinks designs and builds our physical environment Divided into sections exploring communication simulation and materialisation Design Transactions explores digital and physical prototyping and testing that challenges the traditional linear construction methods of incremental refinement This novel research investigates the digital chain between phases as an opportunity for extended interdisciplinary design collaboration The highly illustrated book features work from 15 early stage researchers alongside chapters from world leading industry collaborators and academics [Proceedings of the 1993 International Conference on Parallel Processing](#)
