organisations in their efforts to satisfy and keep customers Although there is a substantial literature on customer dissatisfaction and complaining behaviour relatively little progress has been made in developing a theoretical understanding of how consumers evaluate a company's response to service failure and recovery encounters Using perceived justice theory as a conceptual foundation the current research develops and tests a model that 1 explains how customers evaluate service failure and recovery encounters and 2 how these evaluations affect customer satisfaction and subsequent post purchase behaviour and attitudes The study employed a two stage research strategy The first phase of the research included an extensive literature review and exploratory research involving semi structured interviews and experiments This first stage resulted in the development of a research model establishing the links between the antecedents and outcomes of customer satisfaction judgments involving service failure and recovery encounters In the second phase the proposed conceptual model was evaluated through a self administered cross sectional survey Respondents were requested to recall a time when they complained to a travel and tourism services provider about a failed
