Wilson, Samira Kashinath Dhamapurkar, Anita Rose, 2016-02-02 At the age of twenty eight Gary was assaulted by a gang with baseball bats and a hammer resulting in several skull fractures and severe brain damage For nineteen months he had little awareness of his surroundings before he started to show some recovery This inspirational book documents his exceptional journey The book presents a series of

interviews with Gary his mother Wendie who never gave up the medical team who initially treated him and the therapists who worked with him over a period of three years Through their testimony we learn about the devastating effects which can follow a serious assault to the head and the long process of recovery over several years With specialist rehabilitation and continuing family support Gary has exceeded expectations and apart from some minor physical problems he is now a normal young man Surviving Brain Damage after Assault shows that contrary to popular belief considerable gains can be made by people who have experienced a long period of reduced consciousness The book will be of great value to all professionals working in rehabilitation psychologists speech and language therapists occupational therapists social workers and rehabilitation doctors and to people who have sustained a brain injury and their families

**Brain Injury and Recovery** C. Robert Almli, Stanley Finger, T.E. LeVere, Donald G. Stein, 2012-12-06 The idea for the present volume grew from discussions that the four of us had among ourselves and with our colleagues at recent scientific meetings All of us were impressed by the wealth of empirical data that was being generated by investigators interested in brain damage and recovery from both behavioral and biological orientations Nevertheless we were concerned about the relative paucity of attempts to evaluate the data provided by new technologies in more than a narrow context or to present new theories or reexamine time honored ideas in the light of new findings We recognized that science is guided by new technologies by hard data and by theories and ideas Yet we were forced to conclude that although investigators were often anxious to publicize new methods and empirical findings the same could not be said about broad hypotheses underlying concepts or inferences and speculations that extended beyond the empirical data Not only were many scientists not formally discussing the broad implications of their data but when stimulating ideas were presented they were more likely to be heard in the halls or over a meal than in organized sessions at scientific meetings
