Recurrent Miscarriage And Pre Eclampsia: The Roles Played By The Immune System And Antioxidants Rhoda Wilson,2004-10-11 This book examines the role of antioxidants and of the immune system in the pathogenesis of pre eclampsia and recurrent miscarriage Whilst many papers have discussed the role of antioxidants in pre eclampsia and that of the immune system hitherto publication has not considered the two simultaneously The role of the immune system in recurrent miscarriage has been the subject of many papers but whether antioxidants play a part in miscarriage has been less well studied In many ways the problems encountered in the two disorders are similar and this book brings them together

Immune Involvement in Recurrent Pregnancy Loss Gendie Lash, Raj Raghupathy, 2023-11-27 Recurrent pregnancy loss RPL is defined as two or more consecutive pregnancy losses before the 20th week of gestation occurring in 1% 3% of reproductive women Unexplained RPL URPL is a heterogeneous condition affecting approximately 50% of RPL cases with one contributing factor thought to be a disruption in maternal immune tolerance Various immune effectors and molecules in the immune microenvironment establish specific maternal tolerance toward the semi allogeneic fetus during pregnancy Immune cells including innate lymphoid cells ILCs myeloid cells T cells and B cells have been found to contribute to maintaining this maternal immunological tolerance during pregnancy ILCs have been found to be the most abundant immune cells in the pregnant uterus with many studies focusing on the relationship between RPL and either T cells or natural killer NK cells in peripheral blood and the endometrium decidua Despite progress in uncovering the roles of NK and regulatory T cells and cytokines in pregnancy the immune heterogeneity in patients with URPL remains elusive

Reproductive Immunity Samuel Livingston, AI, 2025-03-17 Reproductive Immunity explores the fascinating intersection of the immune and reproductive systems essential for fertility pregnancy and overall health The book delves into how a mother's immune system tolerates a genetically distinct fetus while simultaneously defending against infections One intriguing area covered is the maternal fetal interface where immune tolerance is key to preventing complications like recurrent miscarriage Another is the role of the immune system in reproductive cancers such as ovarian and cervical cancer opening doors for innovative immunotherapies The book uniquely integrates cutting edge immunology with clinical applications in reproductive medicine providing a current overview of the field It emphasizes the importance of understanding immune mechanisms for advancing reproductive medicine Starting with the basic principles of reproductive immunology the book systematically progresses through the maternal fetal interface immunological causes of infertility and finally the role of immunity in

reproductive cancers offering diagnostic and therapeutic strategies

Immunology of Pregnancy 2013 Gérard Chaouat, Olivier Sandra, Nathalie Lédée, 2013-11-08 Since a September 1992 Nature article which read Can there be life without LIF researchers now realize that the maternal immune system is both a foe it can reject the conception and a friend immune cells and molecules are also necessary for successful pregnancy Leukemia Inhibitory Factor LIF when absent prevents embryo implantation in rodents From fecundation to parturition immunity acts as a Janus required but potentially dangerous However the complexity and the diversity of immunity in pregnancy deters many from entering the field This book will try to give a complete overview of immunity from gametes till parturition in brief but with complete chapters and subsections each written by specialists in the field The importance of the topic relies not only on the riddle of the fetal allograft which is per se fascinating but on its consequences linked to the development of IVF and in general Assisted Reproductive Technologies ART Medicine Since the discovery that there would not be mammalian life without LIF it has become clear that Immune Molecules and in general transient post mating inflammatory reactions are required for successful implantation Disruptions of this process can lead to implantation failure sterility In later stages of pregnancy immunological cells mostly of the innate immune system control formation of local spiral arteries Finally a state of tolerance establishes itself whose break leads to immune abortion and the vascular bed is further transformed and enlarged till delivery and here again immunological cytokines do play a major role and can eventually cause immune mediated abortion Failure of not just the cytokine and cell recognition mediated dialogue but also the pre and peri implantation preparation of the uterus as stated leads to sterility early pregnancy loss and recurrent abortions There is also an increasingly stronger argument to implicate immunology in pre eclampsia Further still immunology is also implicated in the control of local infection mother to child transmission of pathogens notably but not limited to HIV Finally pregnancy is the only known physiological phenomenon where the once named suppressor T cells re emerge as regulatory T cells and play a cardinal role This E book provides a complete compendium of gynecological immunology spanning from fecundation to delivery Topics also include the role of various cell types such as T regs ad NK cells in implantation and uterine changes as well as the genetic regulation of immunological processes As such it will be of interest not only to fundamental and reproductive immunologists but more importantly clinicians in obstetrics and gynecology

Immunology of Pregnancy Gil Mor, 2007-12-27 Reproductive Immunology is a growing area in both immunology and reproductive sciences and is helping us to better understand several complications of pregnancy Immunology of Pregnancy is the first book to give a complete and up to date review of our knowledge related to the role of the immune system during pregnancy and the interactions between the placenta and the maternal immune system This new title covers in detail all the different hypotheses and studies related to the immunology of implantation and provide a practical approach for the application of basic reproductive immunology research to pregnancy complications such as preeclampsia pre term labor and IUGR

Immunology of Recurrent

Pregnancy Loss and Implantation Failure Joanna Kwak-Kim, 2022-07-07 Immunology of Recurrent Pregnancy Loss provides doctors and immunologists with the information they need to help couples who experience recurrent pregnancy losses. Sections cover unexplained infertility, repeated in vitro fertilization embryo transfer failures, history of second or third trimester pregnancy losses of unknown cause, or pregnancy with a history of or active autoimmune and/or alloimmune disease. Reproductive failure (RF) including recurrent pregnancy losses (RPL) and repeated implantation failures (RIF) is rather a syndrome than a disease caused by multiple etiologies such as anatomical, endocrine, genetic, infectious, immunological, thrombotic, and unexplained etiologies; hence this book strives to present the latest information. In 27 chapters divided in 5 sections, the book introduces the current update of reproductive immunology topics in RF and provides systematic diagnostic guidelines, systemic and immune etiologies, and therapeutic approaches. Provides detailed immunological background for understanding the etiology and management of reproduction failure. Evaluates various immunological factors involved in the pathogenesis and management of reproduction failure. Gives insights into various immunological and therapeutic approaches for reproduction failure. Obesity as a Risk Factor for Preeclampsia Tanvi Jayendra Shah, 2007
