Recursive Vision Ecological Understanding And Gregory Bateson:

A Recursive Vision Peter Harries-Jones, 1995-01-01 Gregory Bateson was one of the most original social scientists of this century. He is widely known as author of key ideas used in family therapy including the well known condition called double bind. He was also one of the most influential figures in cultural anthropology. In the decade before his death in 1980, Bateson turned toward a consideration of ecology. Standard ecology concentrates on an ecosystem's biomass and on energy budgets supporting life. Bateson came to the conclusion that understanding ecological organization requires a complete switch in scientific perspective. He reasoned that ecological phenomena must be explained primarily through patterns of information and that only through perceiving these informational patterns will we uncover the elusive unity or integration of ecosystems. Bateson believed that relying upon the materialist framework of knowledge dominant in ecological science will deepen errors of interpretation and in the end promote eco crisis. He saw recursive patterns of communication as the basis of order in both natural and human domains. He conducted his investigation first in small scale social settings then among octopus, otters and dolphins. Later he took these investigations to the broader setting of evolutionary analysis and developed a framework of thinking he called an ecology of mind. Finally his inquiry included an ecology of mind in ecological settings: a recursive epistemology. This is the first study of the whole range of Bateson's ecological thought: a comprehensive presentation of Bateson's matrix of ideas. Drawing on unpublished letters and papers, Harries Jones clarifies themes scattered throughout Bateson's own writings, revealing the conceptual consistency inherent in Bateson's position and elaborating ways in which he pioneered aspects of late twentieth century thought.

Upside-Down Gods Peter Harries-Jones, 2016-05-02 This intellectual biography covers the trajectory of Bateson's career from his anthropological work in Bali alongside his wife Margaret Mead to his contributions to family therapy in the United States and to studies of recursion as a feature of communication patterns in both the human and in the animal world. Layers of feedback with their many differing contexts highlight the presence of meaning in social relations in contrast to that absence of meaning purposefully proposed within information theory. Throughout the human and in the animal world recursion of feedback accounts for grasp of patterns, their difference and with ability to communicate enable transduction of perceptions of difference. Bateson's insistence on feedback and communication re-frames many aspects of culture, psychology, biology and evolution. His legacy is recognized as an important precursor to the formation of a new science called Biosemiotics. Harries Jones argues that Bateson turns conventional causality upside down through showing how humanity's perceptions as with perceptions of all sentient beings are anticipative. All sentient beings abduct from recursive patterns rather than relying on linear evidence gathered about time space movements of objects. Thus circular patterning provides clearer perceptions of the difference between sustainable creativity and current biocide between our appreciation of nature's aesthetics and time space games of power which underlie so many social and biological theories.

Recursivity and Contingency Yuk Hui, 2019-01-28 This book employs recursivity and contingency as two principle

concepts to investigate into the relation between nature and technology machine and organism system and freedom It reconstructs a trajectory of thought from an Organic condition of thinking elaborated by Kant passing by the philosophy of nature Schelling and Hegel to the 20th century Organicism Bertalanffy Needham Whitehead Wiener among others and Organology Bergson Canguilhem Simondon Stiegler and questions the new condition of philosophizing in the time of algorithmic contingency ecological and algorithmic catastrophes which Heidegger calls the end of philosophy The book centres on the following speculative question if in the philosophical tradition the concept of contingency is always related to the laws of nature then in what way can we understand contingency in related to technical systems The book situates the concept of recursivity as a break from the Cartesian mechanism and the drive of system construction it elaborates on the necessity of contingency in such epistemological rupture where nature ends and system emerges In this development we see how German idealism is precursor to cybernetics and the Anthropocene and Noosphere Teilhard de Chardin point toward the realization of a gigantic cybernetic system which lead us back to the question of freedom It questions the concept of absolute contingency Meillassoux and proposes a cosmotechnical pluralism Engaging with modern and contemporary European philosophy as well as Chinese thought through the mediation of Needham this book refers to cybernetics mathematics artificial intelligence and inhumanism

[Linking Industry and Ecology](#) Ray

Côté, James Tansey, Ann Dale, 2015-08-01 It might at first glance seem to many that industry and ecology make strange bedfellows For proponents of sustainable development however such a union is crucial How else are we to make the industries that are so central to modern societies consistent with our visions of a sustainable future Linking Industry and Ecology explores the origins promise and relevance of the emerging field of industrial ecology It situates industrial ecology within the broader range of environmental management strategies and concepts from the practices of pollution prevention through life cycle management to the more fundamental shift toward dematerialization and ecological design The book makes a compelling argument for the need to think ecologically to develop innovative and competitive industrial policy The contributors to this volume draw on their experience in a variety of disciplines to chart a clear path for industrial ecology Their work not only affirms what has been learned to date in this nascent field but also provides new insight for a discourse traditionally dominated by natural scientists and engineers by demonstrating that technologies are socially and politically embedded *Literature of Nature* Patrick D. Feit, Glenn McRae, 2004 Authored as a result of a remarkable collaboration between indigenous people s own leaders other social activists and scholars from a wide range of disciplines this volume explores what is happening today to indigenous peoples as they are enmeshed almost inevitably in the remorseless expansion of the modern economy and development at the behest of the pressures of the market place and government It is particularly timely given the rise in criticism of free market capitalism generally as well as of development The volume seeks to capture the complex power laden often contradictory features of

indigenous agency and relationships It shows how peoples do not just resist or react to the pressures of market and state but also initiate and sustain life projects of their own which embody local history and incorporate plans to improve their social and economic ways of living Betting Against the Crowd Yair Neuman, 2024-02-20 Crowds are misleading both in their simplicity and in their complexity On the one hand they behave according to expected trends on the other they present sudden shifts and frantic unexpected behavior Therefore betting against the crowd whether in politics sports or finance requires a deep understanding of the crowd s dynamics In this book Prof Neuman addresses this challenge by delving into the complexity of crowds The book involves foundational issues and novel ideas such as why crowds behave unexpectedly why betting against the crowd is possible only in short time frames why is it important to be attentive to suspicious signs that are indicative of the crowd s behavior and why the long tail of fatalities in armed conflicts leaves us surprised by blitz attacks of violent mobs The book combines scientific knowledge experiments and accessible often humorous exposition It can be read by anyone with a basic science education who seeks to understand crowds and how one can act within and against them
