Reversal Of Multidrug Resistance In Cancer:

Reversal of Multidrug Resistance in Cancer John A. Kellen, 1993-12-06 This critical state of the art review brings together the scattered and often controversial information on multidrug resistance reversal. Leading scientists in the field cover P-glycoprotein, the genetics of resistance and its reversal by drugs. Resistance modifiers and modulators are tabulated and critically evaluated. *Reversal of Multidrug Resistance in Cancer* is important reading for oncologists, cancer chemotherapists and other cancer researchers. *Alternative Mechanisms of Multidrug Resistance in Cancer* John A. Kellen, 2012-12-06 Nullius in verba. Truth will be tested not by words. Horace Epistles. Few read introductions except for book reviewers who want to take a shortcut and avoid reading the book itself. However, tradition requires that the preface make public why the book was written at all. This is not supposed to include powerful reasons such as augmenting the ego of the editor and authors. Frequently the inflationary tendency to publish in verbose length is in conflict with market forces and interest. No doubt multidrug resistance is a fashionable topic but there are many fashions displayed on the catwalk of scientific literature. One can rationalize that the forces driving our concern with multi-drug resistance reflect the frustration of pharmaceutical companies and oncologists alike as soon as a new anticancer drug enters clinical trials, cancer cells start eluding extinction with their elaborate and successful mechanisms. Many grants have been awarded and spent only to confirm the futility of our efforts to defeat this cellular Darwinism. Our medical and scientific training makes it hard if not impossible to accept that the survival of a malignant cell alone or as part of a tissue is part of the continuance of life. Since exposure to noxious and lethal substances is unavoidable, cells have been forced to develop a multitude of mechanisms to prevent entry or accelerate exit of such materials from intracellular space. **Reversal of Multidrug Resistance in Cancer**, 1994 **Anticancer Drug Resistance** Lori J. Goldstein, Robert F. Ozols, 2012-12-06 Over the last 50 years drug development and clinical trials have resulted in successful complete responses in diseases such as childhood leukemia, testicular cancer and Hodgkin's disease. We are still however confronted with over 500 000 cancer-related deaths per year. Clearly the phenomenon of drug resistance is largely responsible for these failures and continues to be an area of active investigation. Since the last volume in this series we have learned that the energy-dependent drug efflux protein P-glycoprotein encoded by the MDR 1 gene is a member of a family of structurally related transport polypeptides thus allowing us to explore the relationship between structure and function. In addition to ongoing well-designed clinical trials aimed at reversing MDR-mediated drug resistance, the first gene therapy studies with the MDR 1 gene retrovirally transduced into human bone marrow cells are about to be initiated. Although MDR is currently the most understood mechanism of drug resistance, we are uncovering increasing knowledge of alternative molecular and biochemical mechanisms of drug resistance to antimetabolites, cisplatin and alkylating agents and developing new strategies for circumventing such resistance. It is clear that drug resistance is complex and many mechanisms exist by which cancer cells may overcome the cytotoxicity of our

known chemotherapeutic agents As our understanding of each of these mechanisms expands well designed models will be necessary to test laboratory hypotheses and determine their relationship to drug resistance in humans It is this integration of basic science and clinical investigation that will both advance our scientific knowledge and result in the improvement of cancer therapy

Drug Efflux Pumps in Cancer Resistance Pathways: From Molecular Recognition and Characterization to Possible Inhibition Strategies in Chemotherapy, 2019-11-07 Drug Efflux Pumps in Cancer Resistance Pathways From Molecular Recognition and Characterization to Possible Inhibition Strategies in Chemotherapy Volume Seven describes the fundamental aspects of efflux pumps of the ATP binding cassette superfamily in cancer resistance pathways along with strategies to target and improve chemotherapy efficacy Pumps of the ATP binding cassette superfamily ABCs regulate the access of drugs to the intracellular space In this context the overexpression of ABCs is a well known mechanism of multidrug resistance in cancer and is associated with therapeutic failure Cancer types discussed include breast endocrine hematologic gastrointestinal musculoskeletal lung skin and central nervous system cancers The book is a valuable source for researchers and advanced students in cancer biology pharmacology pharmaceutical sciences biomaterials and medical clinical sciences that are interested in accessing a comprehensive compendium on efflux pumps in mechanisms of cancer resistance Offers comprehensive and detailed descriptions of the basic aspects of efflux pumps in a very schematic and didactic manner Describes the involvement of efflux pumps in cancer resistance in different cancer types Encompasses an updated overview on state of the art approaches that capitalize on their inhibition to improve chemotherapy and overcome resistance

Mahendra Rai, 2025-02-18 Fighting Multidrug Resistance with Herbal Extracts Essential Oils and their Components Second Edition offers pharmaceutical and life sciences researchers an overview on the most relevant studies for fighting specific multidrug resistant MDR microorganisms such as bacteria protozoans viruses and fungi using natural products This new edition expands the coverage of uses of traditional medicinal plants to against MDR includes new chapters on the potential of plant derived bioactive compounds for reversal of multidrug resistances covers the use of flavonoids to combat microbes and cancer and the use of nanoparticles as drug delivery vehicle The need to combat multidrug resistant microorganisms is an urgent one This book provides important coverage of mechanism of action the advantages and disadvantages of using herbal extracts essential oils and their components and more to aid researchers in effective antimicrobial drug discovery Presents four new chapters and special focus on plant based nanoparticles Provides readers with current evidence based content aimed at using herbal extracts and essential oils in antimicrobial drug development Includes chapters devoted to the activity of herbal products against herpes AIDS tuberculosis drug resistant cancer cells and more Addresses the need to develop safe and effective approaches to coping with resistance to all classes of antimicrobial drugs

Multi-drug Resistance in Cancer Jun Zhou, 2010 With the devastating complication of cancer cells becoming simultaneously resistant to many

structurally and mechanistically unrelated drugs the efficacy of chemotherapeutic management of cancer often becomes severely limited In Multi Drug Resistance in Cancer leading researchers in the field provide comprehensive and up to date reviews of multidrug resistance mechanisms from over expression of ATP binding cassette drug transporters such as P glycoprotein multidrug resistance associated proteins and breast cancer resistance protein to the drug ratio dependent antagonism and the paradigm of cancer stem cells The extensive volume also includes strategies to overcome multidrug resistance from the development of compounds that inhibit drug transporter function to the modulation of transporter expression as well as techniques for detection and imaging of drug transporters methods for investigation of drug resistance in animal models and strategies to evaluate the efficacy of resistance reversal agents As a volume in the highly successful Methods in Molecular Biology series this work provides the kind of detailed description and implementation advice that is crucial for getting optimal results Authoritative and cutting edge Multi Drug Resistance in Cancer offers a state of art collection of reviews and methods for both basic and clinician investigators who are interested in the vital study of cancer multi drug resistance mechanisms and reversal strategies

Molecular and Clinical Advances in Anticancer Drug Resistance Robert F. Ozols, 2012-12-06 The importance of drug resistance in cancer chemotherapy cannot be over stated The 500 000 patients who die every year from cancer in the United States have in most cases been treated with chemotherapy Many of these patients responded initially to chemotherapy but death resulted from the development of drug resistant tumors In the first volume in the series Drug Resistance in Chemotherapy the results of comprehensive laboratory studies aimed at understanding the mechanisms for resistance to individual agents and to the development of broad cross resistance were described In the past 2 years there has been substantial progress in understanding the molecular biology associated with these mechanisms of drug resistance For the first time we are starting to understand which mechanisms are playing an important role in human tumors and even more importantly clinical trials have recently been initiated in an effort to reverse specific forms of drug resistance The purpose of this volume is to describe the new advances both at the molecular level and in the clinic regarding mechanisms of drug resistance and potential ways this resistance can be circumvented This volume is focused upon mechanisms of resistance associated with two major classes of anticancer drugs alkylating agents including cisplatin and the natural products e g adriamycin and vinblastine The first section of the book describes new insights into the genetic mechanisms associated with drug resistance

Drug Resistance in Leishmania Parasites Alicia Ponte-Sucre, Maritza Padrón-Nieves, 2018-08-23 Drug resistance is a fundamental factor in treatment failure in diseases like leishmaniasis although additional factors also play a role in this phenomenon This volume is the second edition of a well received book that provides a comprehensive update on the pathology of the disease as well as on the concept of parasitic drug resistance its molecular basis consequences and possible treatments A valuable resource for scientists both from academia and industry involved in biomedical research and drug design the book provides the knowledge needed to

understand leishmaniasis and to contribute to combatting this disease worldwide Reversal of Multidrug Resistance Fluorescently Measured in Single Cancer Cells Captured in the Microfluidic Chip Avid Khamenehfar, 2015 In chemotherapy cancer cells may show resistance to a wide range of anticancer drugs a phenomenon called multidrug resistance MDR A well established cause of MDR in cancer cells involves transporter proteins such as permeability glycoprotein P gp multidrug resistance associated protein 1 MRP1 and breast cancer resistance protein BCRP These proteins usually cause efflux of anticancer drugs such as daunorubicin DNR and paclitaxel PTX from cells leading to a reduction in cellular drug accumulation Blocking the activity of transporter proteins using MDR inhibitors is an important approach to overcome drug efflux a method called MDR reversal The overall goal of this research was to develop microfluidic chips and methods to enhance intracellular drug accumulation in MDR cells or reverse MDR To investigate MDR inhibition a microfluidic method called same single cell analysis was used to trap and measure single cells In this method drug accumulation was first measured in the trapped cell treated with anticancer drug only control experiment Then enhancement of drug accumulation was measured in the same single cell treated with the drug in the presence of a MDR inhibitor Cancer cells are usually heterogeneous This single cell method allowed us to conduct same cell analysis that overcame the issue of cell heterogeneity Our method also successfully demonstrated the enhancement of drug accumulation measured in the single cells from cryopreserved patient cells In addition the real time measurement in single cells provided time dependent kinetic information that correlated with the fold increase of drug accumulation enhancement by MDR inhibitors Most importantly a new integrated microfluidic chip was developed to select and measure rare cancer cells among many blood cells as a model of circulating tumor cells CTCs Our label free microchip was used to separate single prostate cancer cells and measure the drug accumulation enhancement by using MDR inhibitors A method of capturing a prostate cancer cell among blood cells was developed with an ultimate goal to find the appropriate MDR inhibitors to enhance cellular accumulation of anticancer drugs leading to more effective chemotherapy
