Sexual Segregation In Vertebrates:

Sexual Segregation in Vertebrates Kathreen Ruckstuhl, Peter Neuhaus, 2006-01-05 Males and females often differ in developmental patterns adult morphology ecology and behaviour and in many mammals males are often larger Size dimorphism results in divergent nutritional and energetic requirements or reproductive strategies by the sexes which in turn sometimes causes them to select different forage use different habitats and express differing social affinities Such divergent life styles often lead males and females to live large parts of their lives separately Sexual segregation is widespread in animals Males and females may share the same habitat but at different times for example or they might use different habitats entirely Why did sexual segregation evolve and what factors contribute to it Sexual Segregation in Vertebrates explores these questions by looking at a wide range of vertebrates and is aimed as a synthesis of our current understanding and a guide for future research

Sexual Segregation in Vertebrates Kathreen Ruckstuhl, Peter Neuhaus, 2005 [Sexual Segregation in Ungulates](#) R. Terry Bowyer, 2022-11-15 Why does it benefit some male and female animals to live separately Winner of the Wildlife Society Publication Best Authored Book Award by The Wildlife Society Sexual segregation wherein the sexes of a species live apart for long periods of time has far reaching consequences for the ecology behavior and conservation of hooved mammals which are called ungulates Award winning researcher R Terry Bowyer has spent the past four decades unravelling the causes and consequences of this perplexing phenomenon by studying ungulates and the large carnivores that prey upon them In Sexual Segregation in Ungulates Bowyer s critical thought provoking approach helps resolve long standing disagreements concerning sexual segregation and offers future pathways for species and habitat conservation He highlights important elements of the natural history of wild ungulate species including bighorn sheep and elk He then uses this perspective to frame and test hypotheses illuminating the motivations behind sexual segregation He investigates the role of sexual segregation in mechanisms underpinning ungulate mating systems sexual dimorphism paternal behavior and population dynamics Bowyer s research spans ecosystems from deserts to the Arctic and involves most species of ungulates inhabiting the North American continent He also provides a timely review of sexual segregation for species of plants and other animals including humans Covering definitions theory findings and practical applications of related study Bowyer describes the behavioral patterns related to sexual segregation explains how to detect these patterns and considers the implications of sexual segregation for new approaches to conservation and management of ungulates and other species of wildlife This book is essential reading for scientists and all those interested in the conservation and management of species including wildlife professionals hunters outdoor enthusiasts and naturalists

Elephants and Savanna Woodland Ecosystems Christina Skarpe,Johan T. du Toit,Stein R. Moe,2014-04-02 During the nineteenth century ivory hunting caused a substantial decrease of elephant numbers in southern Africa Soon after that populations of many other large and medium sized herbivores went into steep decline due to the rinderpest pandemic in the 1890s These two events provided an opportunity for woodland establishment in areas previously intensively utilized by elephants and other herbivores The return of elephants to currently protected areas of their former range has greatly influenced vegetation locally and the resulting potential negative effects on biodiversity are causing concern among stakeholders managers and scientists This book focuses on the ecological effects of the increasing elephant population in northern Botswana presenting the importance of the elephants for the heterogeneity of the system and showing that elephant ecology involves much wider spatiotemporal scales than was previously thought Drawing on the results of their research the authors discuss elephant caused effects on vegetation in nutrient rich and nutrient poor savannas and the potential competition between elephants on the one hand and browsers and mixed feeders on the other Ultimately this text provides a comprehensive review of ecological processes in African savannas covering long term ecosystem changes and human wildlife conflicts It summarises new knowledge on the ecology of the sub humid African savanna ecosystems to advance the general functional understanding of savanna ecosystems across moisture and nutrient gradients
