McElmurray's raw poignant account of her journey from her teen years when she put her newborn child up for adoption to adulthood and a desperate search for the son she never knew. In a patchwork narrative interwoven with dark memories from her childhood, McElmurray deftly treads where few dare into a gritty honest exploration of the loss a birth mother experiences. The year was 1973, a time of social upheaval even in small town Kentucky where McElmurray grew up. More than a story of time and place, however, this is about a girl who at the age of sixteen relinquished her son at birth. Twenty five years would pass before McElmurray began sharing this part of her past with others and actively looking for her son. McElmurray's own troubled upbringing and her quest after a now fully grown son are the heart of her story. With unflinching honesty, McElmurray recounts both the painful surrendering and the surprise rediscovery of her son juxtaposed with her portrayal of her own mother who could not provide the love she needed. The dramatic result is a story of birthright lost and found and an exploration of the meaning of motherhood itself.

*Arid Lands Water Evaluation and Management* Robert Maliva, Thomas Missimer, 2012-06-09 A large part of the global population lives in arid lands which have low rainfall and often lack the water required for sustainable population and economic growth. This book presents a comprehensive description of the hydrogeology and hydrologic processes at work in arid lands. It describes the techniques that can be used to assess and manage the water resources of these areas with an emphasis on groundwater resources, including recent advances in hydrologic evaluation and the differences between how aquifer systems behave in arid lands versus more humid areas. Water management techniques are described and summarized to show how a more comprehensive approach to water management is required in these areas, including the need to be aware of cultural sensitivities and conditions unique to many arid regions. The integration of existing resources with the addition of new water sources such as desalination of brackish water and seawater, along with reusing treated wastewater, will be required to meet future water

supply needs Also changing climatic conditions will force water management systems to be more robust so that future water supply demands can be met as droughts become more intense and rainfall events become more intense A range of water management techniques are described and discussed in order to illustrate the methods for integrating these measures within the context of arid lands conditions
