James Rybka, 2011-05-01 Bohemian composer Bohuslav Martinu 1890 1959 was exceptionally prolific composing over 400 imaginative well crafted and diverse pieces including symphonies operas ballet scores and other orchestral works For 12

years 1941-1953 he lived in America during which he enjoyed a brilliant reputation and his works were played by nearly all the major orchestras. Yet today his works are rarely performed. In *Bohuslav Martinu: The Compulsion to Compose* F. James Rybka provides a documented explanation for Martinu's amazing output: he had Asperger syndrome. Indeed, Martinu is believed to be the first composer ever to be documented, albeit retrospectively, with an autistic spectrum disorder. In this unique biography, Rybka follows Martinu's life from his birth in Policka, Bohemia, to his composition studies with Albert Roussel, his escape from Nazis, and his rise as an internationally recognized composer with premieres of his works in Boston, Prague, London, and Basel. As Rybka explains how the dynamics of Asperger Syndrome affected the composer's work, readers will more fully appreciate Martinu's accomplishments and legacy. Containing important letters and photographs, this book will inspire and inform those impacted by autism but will also be of interest to music scholars and students alike. *Nerds* David Anderegg, 2007. Examines the educational and social implications of stereotyping children with special interests or high academic abilities and love of learning. *The Irritable Male Syndrome* Jed Diamond, 2005-09-03. A guide to dealing with hormone-related mood swings in men describes the triggers and warning signs of Irritable Male Syndrome, the ways it can affect those suffering from it, and the best ways for men and their families to work through it. Reprint. **Neurodiversity** Thomas Armstrong, 2010-09-07. A new term has emerged from the disability movement in the past decade to help change the way we think about neurological disorders: Neurodiversity. ADHD, Dyslexia, Autism. The number of categories of illnesses listed by the American Psychiatric Association has tripled in the past fifty years. With so many people affected by our growing culture of disabilities, it no longer makes sense to hold on to the deficit-ridden idea of neuropsychological illness. With the sensibility of Oliver Sacks and Kay Redfield Jamison, psychologist Thomas Armstrong offers a revolutionary perspective that reframes many neuropsychological disorders as part of the natural diversity of the human brain rather than as definitive illnesses. Neurodiversity emphasizes their positive dimensions, showing how people with ADHD, bipolar disorder, and other conditions have inherent evolutionary advantages that, matched with the appropriate environment or ecological niche, can help them achieve dignity and wholeness in their lives. Constructing Autism Majia Holmer Nadesan, 2013-09-05. Autism is now considered to be one of the most common developmental disorders today, yet 100 years ago the term did not exist. This book examines the historical and social events that enabled autism to be identified as a distinct disorder in the early twentieth century. The author herself, the mother of an autistic child, argues that although there is without doubt a biogenetic component to the condition, it is the social factors involved in its identification, interpretation, and remediation that determine what it means to be autistic. *Constructing Autism* explores the social practices and institutions that reflect and shape the way we think about autism and what effects this has on autistic people and their families. Unravelling what appears to be the truth about autism, this informative book steps behind the history of its emergence as a modern disorder to see how it has become a crisis of twenty-first-century child development. *The Power of Neurodiversity* Thomas Armstrong, 2011-10-04. Develop a

new understanding of neurodivergence with this thoughtful exploration of the human mind from a bestselling author and psychologist From ADHD and dyslexia to autism the number of diagnosis categories listed by the American Psychiatric Association has tripled in the last fifty years With so many people affected it is time to revisit our perceptions of people with disabilities Bestselling author psychologist and educator Thomas Armstrong illuminates a new understanding of neuropsychological disorders He argues that if they are a part of the natural diversity of the human brain they cannot simply be defined as illnesses Armstrong explores the evolutionary advantages special skills and other positive dimensions of these conditions A manifesto as well as a keenly intelligent look at disability **The Power of Neurodiversity** is a must for parents teachers and anyone who is looking to learn more about neurodivergence
