Westfall, William Sheehan, 2014-11-19 Much of what is known about the universe came from the study of celestial shadows This book looks in detail at the way eclipses and other celestial shadows have given us amazing insights into the nature of the objects in our solar system and how they are even helping us discover and analyze planets that orbit stars other than our Sun A variety of eclipses transits and occultations of the moons of Jupiter and Saturn Pluto and its satellite Charon asteroids and stars have helped astronomers to work out their dimensions structures and shapes even the existence of atmospheres and structures of exoplanets Long before Columbus set out to reach the Far East by sailing West the curved shadow of the Earth on the Moon during a lunar eclipse revealed that we inhabit a round world a globe More recently comparisons of the sunlit and Earthlit parts of the Moon have been used to determine changes in the Earth's brightness as a way of monitoring possible effects in cloud coverage which may be related to global warming Shadows were used by the Greek mathematician Eratosthenes to work out the first estimate of the circumference of the Earth by Galileo to measure the heights of the lunar mountains and by eighteenth century astronomers to determine the scale of the Solar System itself Some of the rarest and most wonderful shadows of all are those cast onto Earth by the lovely Evening Star Venus as it goes between the Earth and the Sun These majestic transits of Venus occur at most two in a century after the 2012 transit there is not a chance to observe this phenomenon until 2117 while the more common sweep of a total solar eclipse creates one of the most dramatic and awe inspiring events of nature Though it may have once been a source of consternation or dread solar eclipses now lead thousands of amateur astronomers and eclipse chasers to travel the globe in order to experience the dramatic view under totality These phenomena are among the most spectacular available to observers and are given their full due in Westfall and Sheehan's comprehensive study     **Celestial Delights** Francis Reddy, 2011-11-12 *Celestial Delights* is essentially a TV Guide for the sky This will be its third edition This title which has aggregated sales of about 20 000 copies to date in its two previous editions and has found a niche with skygazers is much awaited Through extensive graphics integrated with an eight year long calendar of sky events it provides a look at don't miss sky events mostly for naked eye and binocular observing The book is organized by ease of observation lunar phases and the brighter planets come first while solar eclipses the aurora and comets come later *Celestial Delights* also includes a hefty dose of sky lore astronomical history and clear overviews of current science It provides a handy reference to upcoming naked eye events with information broken out in clear and simple diagrams and tables that are cross referenced against a detailed almanac for each year covered Most broad ranging astronomy field guides focus on stars constellations and the deep sky but tend to ignore planetary events which are in by far the most widely observable aspects of the changing night sky *Celestial Delights* puts a variety of information all in one place presents it in a friendly way that does not require prior in depth astronomical knowledge but provides the context and

historical background for understanding events that astronomical computer programs or web sites lack **AF Press Clips**
