O'Leary, 2015-09-14 A mathematical introduction to the theory and applications of logic and set theory with an emphasis on writing proofs Highlighting the applications and notations of basic mathematical concepts within the framework of logic and set theory A First Course in Mathematical Logic and Set Theory introduces how logic is used to prepare and structure proofs and solve more complex problems The book begins with propositional logic including two column proofs and truth table applications followed by first order logic which provides the structure for writing mathematical proofs Set theory is then introduced and serves as the basis for defining relations functions numbers mathematical induction ordinals and cardinals The book concludes with a primer on basic model theory with applications to abstract algebra A First Course in Mathematical Logic and Set Theory also includes Section exercises designed to show the interactions between topics and reinforce the presented ideas and concepts Numerous examples that illustrate theorems and employ basic concepts such as Euclid's lemma the Fibonacci sequence and unique factorization Coverage of important theorems including the well ordering theorem completeness theorem compactness theorem as well as the theorems of Löwenheim Skolem Burali Forti Hartogs Cantor Schröder Bernstein and König An excellent textbook for students studying the foundations of mathematics and mathematical proofs A First Course in Mathematical Logic and Set Theory is also appropriate for readers preparing for careers in mathematics education or computer science In addition the book is ideal for introductory courses on mathematical logic and or set theory and appropriate for upper undergraduate transition courses with rigorous mathematical reasoning involving algebra number theory or analysis **A First Course in Logic** Mark Verus Lawson, 2018-12-07 A First Course in Logic is an introduction to first order logic suitable for first and second year mathematicians and computer scientists There are three components to this course propositional logic Boolean algebras and predicate first order logic Logic is the basis of proofs in mathematics how do we know what we say is true and also of computer science how do I know this program will do what I think it will

Surprisingly little mathematics is needed to learn and understand logic this course doesn't involve any calculus The real mathematical prerequisite is an ability to manipulate symbols in other words basic algebra Anyone who can write programs should have this ability

**Logic: a Brief Course** Daniele Mundici, 2012-03-29 This short book geared towards undergraduate students of computer science and mathematics is specifically designed for a first course in mathematical logic A proof of Gödel's completeness theorem and its main consequences is given using Robinson's completeness theorem and Gödel's compactness theorem for propositional logic The reader will familiarize himself with many basic ideas and artifacts of mathematical logic a non ambiguous syntax logical equivalence and consequence relation the Davis Putnam procedure Tarski semantics Herbrand models the axioms of identity Skolem normal forms nonstandard models and interestingly enough proofs and refutations viewed as graphic objects The mathematical prerequisites are minimal the book is accessible to anybody having some familiarity with proofs by induction Many exercises on the relationship between natural language and formal proofs make the book also interesting to a wide range of students of philosophy and linguistics

Computability Nigel Cutland, 1980-06-19 What can computers do in principle What are their inherent theoretical limitations The theoretical framework which enables such questions to be answered has been developed over the last fifty years from the idea of a computable function a function whose values can be calculated in an automatic way

*Mathematical Logic* Daniel Cunningham, 2023-05-22 Mathematical Logic An Introduction is a textbook that uses mathematical tools to investigate mathematics itself In particular the concepts of proof and truth are examined The book presents the fundamental topics in mathematical logic and presents clear and complete proofs throughout the text Such proofs are used to develop the language of propositional logic and the language of first order logic including the notion of a formal deduction The text also covers Tarski's definition of truth and the computability concept It also provides coherent proofs of Gödel's completeness and incompleteness theorems Moreover the text was written with the student in mind and thus it provides an accessible introduction to mathematical logic In particular the text explicitly shows the reader how to prove the basic theorems and presents detailed proofs throughout the book Most undergraduate books on mathematical logic are written for a reader who is well versed in logical notation and mathematical proof This textbook is written to attract a wider audience including students who are not yet experts in the art of mathematical proof
