Mathematical Exploration Of The Environment:

Mathematical Exploration of the Environment István Bán,1995 One of the most important tasks of mathematics is to describe or approximate the phenomena of nature as exactly as possible and to provide a useful tool in the exploration of nature For a deeper understanding of natural phenomena we need a systematized definition of the most important mathematical notions and statements In this book a new concept of the structure of the environment is introduced The environment has a porous structure This concept applies sets of state characteristic values The book provides a mathematical method which can process a very high number and different kinds of state characteristic values surveys the complex correlations and explains the structure and the local and global properties of the environment by means of a novel mathematical interpretation
