Mathematical Methods In Electromagnetism: Linear Theory And Applications Michel Cessenat,1996-07-13 This book provides the reader with basic tools to solve problems of electromagnetism in their natural functional frameworks thanks to modern mathematical methods integral surface methods and also semigroups variational methods etc well adapted to a numerical approach As examples of applications of these tools and concepts we solve several fundamental problems of electromagnetism stationary or time dependent scattering of an incident wave by an obstacle bounded or not by gratings wave propagation in a waveguide with junctions and cascades We hope that mathematical notions will allow a better understanding of modelization in electromagnetism and emphasize the essential features related to the geometry and nature of materials **Mathematical Methods in Scattering Theory and Biomedical Engineering** Dimitrios Ioannou Fotiadis,Christos Massalas,2006 This volume comprises the papers presented at the Seventh International Workshop on Scattering Theory and Biomedical Engineering focusing on the hottest topics in scattering theory and biomedical technology All the contributions are state of the art and have been fully reviewed The authors are recognized as being eminent both in their field and in the science community *Mathematical Methods of Game and Economic Theory* Jean-Pierre Aubin,2007-01-01 Mathematical economics and game theory approached with the fundamental mathematical toolbox of nonlinear functional analysis are the central themes of this text Both optimization and equilibrium theories are covered in full detail The book s central application is the fundamental economic problem of allocating scarce resources among competing agents which leads to considerations of the interrelated applications in game theory and the theory of optimization Mathematicians mathematical economists and operations research specialists will find that it provides a solid foundation in nonlinear functional analysis This text begins by developing linear and convex analysis in the context of optimization theory The treatment includes results on the existence and stability of solutions to optimization problems as well as an introduction to duality theory The second part explores a number of topics in game theory and mathematical economics including two person games which provide the framework to study theorems of nonlinear analysis The text concludes with an introduction to non linear analysis and optimal control theory including an array of fixed point and subjectivity theorems that offer powerful tools in proving existence theorems Mathematical Methods XIB Douglas Henderson,2012-12-02 Physical Chemistry An Advanced Treatise Volume XIB Mathematical Methods focuses on mathematical techniques that consist of concepts relating to differentiation and integration This book discusses the methods in lattice statistics Pfaffian solution of the planar Ising problem and probability theory and stochastic processes The random variables and probability distributions non equilibrium problems Brownian motion and scattering theory are also elaborated This text likewise covers the elastic scattering from atoms solution of integral and differential equations concepts in graph theory and theory of operator equations This volume provides graduate and physical chemistry students a basic understanding of mathematical techniques

important in chemistry   **Business Cycle Theory, Part II Volume 8** Mauro Boianovsky,2024-10-28 In the mid nineteenth century the business cycle was increasingly recognised as a recurrent phenomenon This edition contains key texts from the range of literature in the field   *Control Theory for Partial Differential Equations: Volume 2, Abstract Hyperbolic-like Systems Over a Finite Time Horizon* Irena Lasiecka,Roberto Triggiani,2000-02-13 Originally published in 2000 this is the second volume of a comprehensive two volume treatment of quadratic optimal control theory for partial differential equations over a finite or infinite time horizon and related differential integral and algebraic Riccati equations Both continuous theory and numerical approximation theory are included The authors use an abstract space operator theoretic approach which is based on semigroups methods and which unifies across a few basic classes of evolution The various abstract frameworks are motivated by and ultimately directed to partial differential equations with boundary point control Volume 2 is focused on the optimal control problem over a finite time interval for hyperbolic dynamical systems A few abstract models are considered each motivated by a particular canonical hyperbolic dynamics It presents numerous fascinating results These volumes will appeal to graduate students and researchers in pure and applied mathematics and theoretical engineering with an interest in optimal control problems   **Structural Aspects in the Theory of Probability** Herbert Heyer,Gyula Pap,2010 The book is conceived as a text accompanying the traditional graduate courses on probability theory An important feature of this enlarged version is the emphasis on algebraic topological aspects leading to a wider and deeper understanding of basic theorems such as those on the structure of continuous convolution semigroups and the corresponding processes with independent increments Fourier transformation the method applied within the settings of Banach spaces locally compact Abelian groups and commutative hypergroups is given an in depth discussion This powerful analytic tool along with the relevant facts of harmonic analysis make it possible to study certain properties of stochastic processes in dependence of the algebraic topological structure of their state spaces In extension of the first edition the new edition contains chapters on the probability theory of generalized convolution structures such as polynomial and Sturm Liouville hypergroups and on the central limit problem for groups such as tori p adic groups and solenoids   *The Theory of Categorial Conversion* Dompere, Kofi Kissi,2017-09-17 The Theory of Categorial Conversion is advanced by Professor Kofi Kissi Dompere as mathematical philosophical and game theoretic foundations to solve the problem of socio natural transformation as governed by some internal process in relation to Marx Schumpeter and Nkrumah Dompere s methodology is based on the Africentric principles of opposites made up of actual potential polarity negative positive duality with relational continuum and unity under cost benefit rationality and Asantrofi Anoma principle supported by fuzzy paradigm of thought Socio natural transformations are seen in terms of game theories in a fuzzy stochastic space admitting of defective deceptive information structures in quality quantity space within the subjective objective duality The main premise of the monograph is that there exists a set of necessary and sufficient conditions for internal self transformation The necessary conditions are made up of categorial

moments and categorial transfer functions forming the domain of control instrumentation in creating the sufficient conditions for categorial conversion processes Dompere presents an important methodological framework for the study and construction of the theories of socioeconomic development and political change as well as info dynamics connecting knowledge sciences innovation and engineering to the space of knowing under qualitative quantitative transformational dynamics with defective deceptive information structures in the games for power and dominance by duals and poles in conflicts The necessary conditions of socio natural transformation are internally derived based on the relational structure of matter energy information activities within the dynamics of qualitative dispositions of dualities of actual potential polarities The theory consists of category formation showing ontological epistemological categories and categorial dynamics shows elemental conversions of categorial varieties in a continuum The logical tools and the paradigm of thought for the theoretical development of Nkrumah s framework involve self excitement self correction and self control systems induced by internal contradictions The set of necessary conditions constitutes the natural necessity that constrains cognitive freedom in socio natural transformations Had this conceptual system been familiar to economists and social scientists the construct of the theories of socioeconomic development and transformations would have been increasingly successful *A Method for Recognizing Fatigue Driving Based on Dempster-Shafer Theory and Fuzzy Neural Network* WenBo Zhu, HuichengYang,Yi Jin,Bingyou Liu, This study proposes a method based on Dempster Shafer theory DST and fuzzy neural network FNN to improve the reliability of recognizing fatigue driving This method measures driving states using multifeature fusion First FNN is introduced to obtaint he basic probability assignment BPA of each piece of evidence given the lack of a general solution to the definition of BPA function Second a modified algorithm that revises conflict evidence is proposed to reduce unreasonable fusion results when unreliable information exists **Mathematical Methods in Kinetic Theory** Carlo Cercignani,2013-12-14 **The Golden Rule of Ethics** Vladislav I. Zhukovskiy,Mindia E. Salukvadze,2021-04-16 This book synthesizes the game theoretic modeling of decision making processes and an ancient moral requirement called the Golden Rule of ethics GR This rule states Behave to others as you would like them to behave to you The GR is one of the oldest most widespread and specific moral requirements that appear in Christianity Islam Judaism Buddhism and Confucianism This book constructs and justifies mathematical models of dynamic socio economic processes and phenomena that reveal the mechanism of the GR and are based on the concept of Berge equilibrium The GR can be naturally used for resolving or balancing conflicts and its altruistic character obviously excludes wars blood letting and armed clashes The previous book by the authors The Berge Equilibrium A Game Theoretic Framework for the Golden Rule of Ethics covers the static case of the GR In this book the dynamic case of the GR is investigated using the altruistic concept of Berge equilibrium and three factors as follows 1 a modification of N N Krasovskii s mathematical formalization of differential positional games DPGs in view of the counterexamples given by A I Subbotin and A F Kononenko 2 the method of guiding control proposed by N N Krasovskii

and 3 the Germier convolution of the payoff functions of different players Additionally this book features exercises problems and solution tips collected together in Appendix 1 as well as new approaches to conflict resolution as presented in Appendices 2 to 4 This book will be of use to undergraduate and graduate students and experts in the field of decision making in complex control and management systems as well as anyone interested in game theory and applications

Character Theory of Finite Groups I. Martin Isaacs,1994-01-01 The book is a pleasure to read There is no question but that it will become and deserves to be a widely used textbook and reference Bulletin of the American Mathematical Society Character theory provides a powerful tool for proving theorems about finite groups In addition to dealing with techniques for applying characters to pure group theory a large part of this book is devoted to the properties of the characters themselves and how these properties reflect and are reflected in the structure of the group Chapter I consists of ring theoretic preliminaries Chapters 2 to 6 and 8 contain the basic material of character theory while Chapter 7 treats an important technique for the application of characters to group theory Chapter 9 considers irreducible representations over arbitrary fields leading to a focus on subfields of the complex numbers in Chapter 10 In Chapter 15 the author introduces Brauer s theory of blocks and modular characters Remaining chapters deal with more specialized topics such as the connections between the set of degrees of the irreducible characters and structure of a group Following each chapter is a selection of carefully thought out problems including exercises examples further results and extensions and variations of theorems in the text Prerequisites for this book are some basic finite group theory the Sylow theorems elementary properties of permutation groups and solvable and nilpotent groups Also useful would be some familiarity with rings and Galois theory In short the

Sobolevskii,2012-12-06 The present monograph is devoted to the construction and investigation of the new high order of accuracy difference schemes of approximating the solutions of regular and singular perturbation boundary value problems for partial differential equations The construction is based on the exact difference scheme and Taylor s decomposition on the two or three points This approach permitted essentially to extend to a class of problems where the theory of difference methods is applicable Namely now it is possible to investigate the differential equations with variable coefficients and regular and singular perturbation boundary value problems The investigation is based on new coercivity inequalities The book will be of value to professional mathematicians as well as advanced students in the fields of numerical analysis functional analysis and ordinary and partial differential equations
