Sociology as Method Paul Dowling, 2009-01-01 Dowling is using the term forensics to refer to approaches to research that claim to uncover truths about the world that are somehow independent of the means of their uncovering For some time now such approaches have been widely regarded as na ve but it is not clear that the implications of this recognition have always been adequately or appropriately taken into account In attempting to do just that Dowling presents a mature exposition of his organisational language social activity method SAM in dialogue with a wide range of cultural settings texts and technologies SAM has been developed over a period of some twenty years via the transaction between a fundamental theoretical principle and empirical data This principle asserts that the sociocultural is to be understood in terms of strategic autopoietic action directed at the formation maintenance and destabilising of alliances and oppositions and the alliances and oppositions that are themselves emergent upon such action This anti forensic constructive description understands data texts not as products of generative structures that lie behind them but as instances of the organisational language SAM that will ultimately describe them and that is in a sense in front of them Dowling describes himself as a theory engineer The productivity of this work is in its potential to generate principled and articulated descriptions of empirical settings and texts new ways of looking at them not to direct but to interrogate other practices relating to these settings and texts to ask questions that would otherwise be left unasked The origins of SAM lie in the analysis of mathematics education texts in the late 1980s and early 1990s and one of the chapters in this volume is again concerned with mathematics and science education in the first part of the twenty first century Other settings that come under scrutiny include classrooms film art literature knowledge in various domains the internet and so forth The book also includes fundamental engagement with forensics in particular the work of and work inspired by Basil Bernstein Paul Dowling is Professor of Education at the Institute of Education University of London Before joining the Institute in 1987 he had taught mathematics in secondary schools in and around London His other publications include *The Sociology of Mathematics Education Mathematical Myths Pedagogic Texts* 1998 Falmer Press and *Doing Research Reading Research Re interrogating education* with Andrew Brown Routledge 1998 and 2009

Making Black Girls Count in Math Education Nicole M. Joseph, 2022-08-16 *Making Black Girls Count in Math Education* explores the experiences of Black girls and women in mathematics from preschool to graduate school deftly probing race and gender inequity in STEM fields Nicole M Joseph investigates factors that contribute to the glaring underrepresentation of Black female students in the mathematics pipeline Joseph s unflinching account calls attention to educational structures and practices that contribute to race and gender based

stratification in science technology engineering and mathematics disciplines The author also disentangles a complex network of historical and sociopolitical elements that influence the perception and experiences of Black girls and women both inside and outside of mathematics education In her clear eyed assessment of the intersectional difficulties facing this marginalized group Joseph offers a critical view of the existing mathematics education research practice and policies that have neglected Black girls and women confronts the problematic history of mathematics education policy and considers imbalances in the current teacher workforce in US mathematics programs She then provides practical actionable suggestions for reform Joseph invites students families and educators as well as researchers policy makers and other relevant stakeholders to disrupt systems structures and ideologies She calls for an end to racism and sexism in many areas of mathematics education including learning environments curriculum design and implementation and testing and assessments An essential read for anyone concerned about supporting the mathematical learning and development of Black girls and women this work advocates for coalition building so that greater more equitable opportunities for learning and engagement may be offered to Black female students
