manner that was constantly oriented towards solving statistical problems In particular it seemed crucial to include a discussion of when and why the various decision prin ciples should be used and indeed why decision theory is needed at all This original goal seemed indicated by my philosophical position at the time which can best be described as basically neutral I felt that no one approach to decision theory or statistics was clearly superior to the others and so planned a rather low key and impartial presentation of the competing ideas In the course of writing the book however I turned into a rabid Bayesian There was no single cause for this conversion just a gradual realization that things seemed to ultimately make sense only when looked at from the Bayesian viewpoint **Mathematics for Action** UNESCO,2022-03-11 *Choice, Decision, and Measurement* A.A.J.
