It is the world of a curious genre known as word problems or story problems. It originated in the ancient civilizations of Egypt, China, and India and is the subject of daily rituals among students and teachers in mathematics classrooms all around the world. An international group of scholars with a shared interest in this phenomenon explore multiple aspects of this world from multiple perspectives. These discussions take us deep into philosophical issues of the relationships between words, mathematical systems, and the physical and social worlds we all inhabit. Empirical investigations are reported that throw light on how students and their teachers experience and interpret this activity, raising profound questions about the nature and purposes of mathematics teaching/learning in general and how it could be improved.

*The Math(s) Fix* Conrad Wolfram, 2020-06-10 Now with a new ChatGPT era foreword. Ebook exclusive that explains how *The Math(s) Fix* addresses key issues not only for the future of maths but for AI age education in general. This book uniquely puts the ChatGPT shock into perspective by offering the reformer's roadmap for reaction to policymakers, employers, parents, teachers, and students. Why are we all taught maths for years of our lives? Does it really empower everyone? Or fail most and disenfranchise many? Is it crucial for the AI age or an obsolete rite of passage? *The Math(s) Fix: An Education Blueprint for the AI Age* is a groundbreaking book that exposes why maths education is in crisis worldwide and how the only fix is a fundamentally new mainstream subject. It argues that today's maths education is not working to elevate society with modern computation, data science, and AI. Instead, students are subjugated to compete with what computers do best and lose. This is the only book to explain why being bad at maths may be as much the subject's fault as the learner's: how a stuck educational ecosystem has students, parents, teachers, schools, employers, and policymakers running in the wrong direction to catch up with real-world requirements. But it goes further too for the first time, setting out a completely alternative vision for a core computational school subject to fix the problem and seed more general reformation of education for the AI age.
