**Mathematics for Elementary School Teachers: A Process Approach** Mark A. Freitag, 2013-01-01 Freitag's MATHEMATICS FOR ELEMENTARY SCHOOL TEACHERS A PROCESS APPROACH was developed using the five Content Standards from the NCTM Principles and Standards for School Mathematics and the Common Core State Standards for Mathematics Traditionally books for pre service elementary teachers have focused on problem solving However problem solving is not the only process through which mathematics is learned It is also learned through mathematical reasoning communication

representation and connections Recent trends in mathematics education now advocate implementing all five processes as a vital part of learning and doing mathematics Consequently you need to have concrete experiences with these processes that you will be required to teach The goal of this book is to treat each of the processes equitably by using an approach in which the five processes serve as the central pedagogical theme Most of the examples exercises and activities are designed to either model the processes or to directly engage you in working with them As a result you will not only come to understand the different processes but also appreciate them as an integral to learning and doing mathematics If this broader view can be instilled you are more likely to give your students a more well rounded and holistic view of mathematics once you enter the classroom The content of the book is directly related to the mathematics that is taught in grades K 8 The purpose is not to reteach elementary mathematics Rather the intent is to look at the content from a theoretical or generalized point of view so that you can better understand the concepts and processes behind the mathematics you will teach In short the book focuses on the why behind the mathematics in addition to the how Available with InfoTrac Student Collections <http://go.cengage.com/infotrac> Important Notice Media content referenced within the product description or the product text may not be available in the ebook version

*Relearning Mathematics* Rina Zazkis, 2011-08-01 This book is grounded in the author s experiences of teaching mathematics for prospective elementary school teachers and conducting research on their understanding of mathematical concepts It is a reflection on practice and an attempt to cope with a double challenge that of a teacher in helping prospective teachers make sense of mathematics and that of a researcher in an attempt to understand and describe the challenges faced by students This work fits within the current community interest on teacher education and provides a novel focus with both theoretical and practical considerations The central claim in this book is that encounters with mathematical content by prospective elementary school teachers constitute relearning rather than learning of mathematics The specific focus is on topics related to elementary number theory e g divisibility prime factorization which is referred to as a forgotten queen following Gauss reference to number theory as a queen of mathematics This is the content area that has not received significant attention in mathematics education research The book can be summarized as an attempt to address the following questions What is relearning of mathematical content and how is it similar to or different from learning What are the examples of specific mathematical topics or concepts that require relearning What pedagogical approaches can support relearning The detailed analysis of research data and pedagogical approaches presented in the book are intertwined with stories of personal experiences of the author which makes the reading not only intellectually stimulating but also enjoyable
