Scheduling and Congestion Control for Wireless Internet Xin Wang, 2013-07-30 This brief proposes that the keys to internet cross layer optimization are the development of non standard implicit primal dual solvers for underlying optimization problems and design of jointly optimal network protocols as decomposition of such solvers Relying on this novel design space oriented approach the author develops joint TCP congestion control and wireless link scheduling schemes for wireless applications over Internet with centralized and distributed multi hop wireless links Different from the existing solutions the proposed schemes can be asynchronously implemented without message passing among network nodes thus they are readily deployed with current infrastructure Moreover global convergence stability of the proposed schemes to optimal equilibrium is

established using the Lyapunov method in the network fluid model Simulation results are provided to evaluate the proposed schemes in practical networks

Frequency-domain Approach To Hopf Bifurcation Analysis: Continuous Time-delayed Systems Franco Sebastian Gentile, Jorge Luis Moiola, Guanrong Chen, 2019-10-07 This book is devoted to the study of an effective frequency domain approach based on systems control theory to compute and analyze several types of standard bifurcation conditions for general continuous time nonlinear dynamical systems A very rich pictorial gallery of local bifurcation diagrams for such nonlinear systems under simultaneous variations of several system parameters is presented Some higher order harmonic balance approximation formulas are derived for analyzing the

oscillatory dynamics in small neighborhoods of certain types of Hopf and degenerate Hopf bifurcations The frequency domain approach is then extended to the large class of delay differential equations where the time delays can be either discrete or distributed For the case of discrete delays two alternatives are presented depending on the structure of the underlying dynamical system where the more general setting is then extended to the case of distributed time delayed systems Some representative examples in engineering and biology are discussed
