Mesozoic Cenozoic Sediments In The Cen:

Geological Evolution of Central Asian Basins and the Western Tien Shan Range Marie-Françoise Brunet, Tom McCann, Edward R. Sobel, 2017-10-10 The geological evolution of Central Asia commenced with the formation of a complex Precambrian Palaeozoic orogen Cimmerian blocks were then accreted to the southern margin in the Mesozoic leading to tectonic reactivation of older structures and discrete episodes of basin formation The Indian and Arabian blocks collided with Asia in the Cenozoic leading to renewed structural reactivation intracontinental deformation and basin development This complex evolution resulted in the present day setting of an elongated Tien Shan range flanked by large Mesozoic Cenozoic sedimentary basins with smaller intramontane basins distributed within the range This volume presents multidisciplinary results and reviews from research groups in Europe and Central Asia that focus on the western part of the Tien Shan and some of the adjacent large sedimentary basins These works elucidate the Late Palaeozoic Cenozoic tectono sedimentary evolution of the area Emphasis is given to the collision of terranes and continents and the ensuing fault reactivations The impact of climatic changes on sedimentation is also examined **Tectonics of Asia (Northern, Central and Eastern Asia)** Oleg V. Petrov, Shuwen Dong, 2021-03-03 The book provides the results of tectonic geological and geophysical studies of Northern Central and Eastern Asia obtained over the last 20 years and a Tectonic map for this area overview as well as essays on its geodynamic evolution These new results were obtained by an international team of specialists within the project Atlas of geological maps of Central Asia and adjacent areas scale 1:2 500 000 initiated in 2003 by geological surveys of Russia China Mongolia Kazakhstan and South Korea under the auspices of the CGMW The most of the book contains the descriptions of the tectonic structure of major geological regions of Asia such as the Ural Sayan Baikal and Tien Shan orogenic systems The tectonic structure of the Pamirs Turan Plate Mongolia Southern China Korea and other regions is also discussed The book contains maps of gravity and magnetic anomalies sketch maps of deep structures of the area and the geotranssect crossing the most important geological structures of Asia The final chapter of the book describes the tectonic evolution of the Central Asian Orogenic Belt from the Neoproterozoic to the Mesozoic *Bulletin of the Geological Society of America* Geological Society of America, 1918 Vols 1-44 include Proceedings of the annual meeting 1889-1933 later published separately **Stratigraphy and Glacial-marine Sediments of the Amerasian Basin, Central Arctic Ocean** David L. The Geology of the Atlantic Ocean Kenneth O. Emery, Elazar Uchupi, 2012-12-06 The explosion of interest effort and information about the ocean since about 1950 has produced many thousand scientific articles and many hundred books In fact the outpouring has been so large that authors have been unable to read much of what has been published so they have tended to concentrate their own work within smaller and smaller subfields of oceanography Summaries of information published in books have taken two main paths One is the grouping of separately authored chapters into symposia type books

with their inevitable overlaps and gaps between chapters The other is production of lightly researched books containing drawings and tables from previous publications with due credit given but showing assembly line writing with little penetration of the unknown Only a few books have combined new and previous data and thoughts into new maps and syntheses that relate the contributions of observed biological chemical geological and physical processes to solve broad problems associated with the shape composition and history of the oceans Such a broad synthesis is the objective of this book in which we tried to bring together many of the pieces of research that were deemed to be of manageable size by their originators The composite may form a sort of plateau above which later studies can rise possibly benefited by our assembly of data in the form of new maps and figures
