Chronobiological Engineering L.E. Scheving, Franz Halberg, Charles F. Ehret, 2012-12-06 High blood pressure BP with fats and smoking is one of the three roots of cardio cerebro renovascular disease affecting up to 25% of the adult population Hence high blood pressure should be recognized and treated to reduce any complications and prolong life as noted by Michael Weber of the Veterans Administration Hospital in Long Beach California He further emphasizes the need for monitoring before one starts the treatment of high blood pressure Indeed he refers to the results of the Australian study on

mild hypertension with a large percentage of placebo responders and rightly suggests that many people are treated who should not be because of white coat associated high blood pressure He also points to the lack of standardization of techniques for data analysis and of methods of BP measurement Ambulatory monitoring under usual conditions without concomitant recording of events does not allow even a qualitative assessment of the impact of varying stimuli in weber s opinion **Advances in Cancer Research** ,1984-11-01 Advances in Cancer Research
