What makes written words so special to the brain? Gui Xue, Urs Maurer, Mohamed L Seghier, 2015-01-22 Reading is an integral part of life in today's information driven societies Since the pioneering work of Dejerine on word blindness in brain lesioned patients the literature has increased exponentially from neuropsychological case reports to mechanistic accounts of word processing at the behavioural neurofunctional and computational levels tapping into diverse aspects of visual word processing These studies have revealed some exciting findings about visual word processing including how the brain learns to read how changes in literacy impact upon word processing strategies and whether word processing mechanisms vary across different alphabetic logographic or artificial writing systems Other studies have attempted to characterise typical and atypical word processes in special populations in order to explain why dyslexic brains struggle with words how multilingualism changes the way our brains see words and what the exact developmental signatures are that would shape the acquisition of reading skills Exciting new insights have also emerged from recent studies that have investigated word stimuli at the system network level by looking for instance at how the reading system interacts with other cognitive systems in a context dependent fashion how visual language stimuli are integrated into the speech processing streams how both left and right hemispheres cooperate and interact during word processing and what the exact contributions of subcortical and cerebellar regions to reading are The contributions to this Research Topic highlight the

latest findings regarding the different issues mentioned above particularly how these findings can explain or model the different processes mechanisms pathways or cognitive strategies by which the human brain sees words The introductory editorial summarising the contributions included here highlights how varieties of behavioural tests and neuroimaging techniques can be used to investigate word processing mechanisms across different alphabetic and logographic writing systems

Textual Magic Katherine Storm Hindley, 2023-08-16 An expansive consideration of charms as a deeply integrated aspect of the English Middle Ages. Katherine Storm Hindley explores words at their most powerful: words that people expected would physically change the world. Medieval Europeans often resorted to the use of spoken or written charms to ensure health or fend off danger. Hindley draws on an unprecedented archive of more than a thousand such charms from medieval England, more than twice the number gathered, transcribed, and edited in previous studies, and including many texts still unknown to specialists on this topic. Focusing on charms from 1100 to 1350 CE, as well as previously unstudied texts in Latin, French, and English, Hindley addresses important questions of how people thought about language, belief, and power. She describes seven hundred years of dynamic shifting cultural landscapes where multiple languages, alphabets, and modes of transmission gained and lost their protective and healing power. Where previous scholarship has bemoaned a lack of continuity in the English charms, Hindley finds surprising links between languages and eras, all without losing sight of the extraordinary variety of the medieval charm tradition, a continuous, deeply rooted part of the English Middle Ages.

Oral World and Written Word Susan Niditch, 1996-01-01 This book is an essential resource for understanding the question of the Bible's relationship to orality. Susan Niditch offers a strong argument for the continuity of the literature of the Israelites. She helps the modern reader look at the Bible as living words breathing life into us daily, instead of seeing the text as a foregone artifact. Volumes in the Library of Ancient Israel draw on multiple disciplines such as archaeology, anthropology, sociology, linguistics, and literary criticism to illuminate the everyday realities and social subtleties these ancient cultures experienced. This series employs sophisticated methods, resulting in original contributions that depict the reality of the people behind the Hebrew Bible and interprets these insights for a wide variety of readers.

Oral-Scribal Dimensions of Scripture, Piety, and Practice Werner H. Kelber, Paula A. Sanders, 2016-09-30 In April 2008, a conference was convened at Rice University that brought together experts in the three monotheistic religions of Judaism, Christianity, and Islam. The papers discussed at the conference are presented here, revised and updated. The thirteen contributions comprise the keynote address by John Miles Foley, three essays on Judaism and the Hebrew Bible, three on the New Testament, three on the Qur'an, and two summarizing pieces by the Africanist Ruth Finnegan and the Islamicist William Graham, respectively. The central thesis of the book states that sacred Scripture was experienced by the three faiths less as a text contained between

two covers and a literary genre and far more as an oral phenomenon In developing the performative recitative aspects of the three religions the authors directly or by implication challenge their distinctly textual identities Instead of viewing the three faiths as quintessential religions of the book these writers argue that the religions have been and continue to be appropriated not only as written but also very much as oral authorities with the two media interpenetrating and mutually influencing each other in myriad ways
