The Heroic Client Barry L. Duncan,Scott D. Miller,Jacqueline A. Sparks,2011-03-10 In this controversial book

psychologists Barry Duncan and Scott Miller cofounders of the Institute for the Study of Therapeutic Change challenge the traditional focus on diagnosis silver bullet techniques and magic pills exposing them as empirically bankrupt practices that only diminish the role of clients and hasten therapy's extinction. Instead they advocate for the long ignored but most crucial factor in therapeutic success: the innate resources of the client. Based on extensive clinical research and case studies, *The Heroic Client* not only shows how to harness the client's powers of regeneration to make therapy effective but also how to enlist the client as a partner to make therapy accountable. *The Heroic Client* inspires therapists to boldly rewrite the drama of therapy, recast clients in their rightful role as heroes and heroines of the therapeutic stage, and legitimize their services to third party payers without the compromises of the medical model.

Psychological Trauma and the Developing Brain
Phyllis Stien, Joshua C Kendall, 2014-01-02

Explore interventions and treatment methods designed to help curb the alarming trend toward violence in today's youth. Written in jargon-free, lucid prose, *Psychological Trauma and the Developing Brain: Neurologically Based Interventions for Troubled Children* specifically shows how positive early experiences enhance brain development and how traumatic life experiences, especially child abuse and neglect, can affect a child's brain and behavior. Through carefully selected case studies, the book offers basic principles of treatment and a broad range of interventions that target the multiple symptoms and problems seen in children with a history of childhood trauma. Offering a new psychobiological model of child development, this book incorporates the influence of both genes and the environment and conceptualizes normal and pathological development in terms of common underlying processes. For readers concerned with promoting healthy development in children and helping children recover from childhood trauma, this engagingly written book describes exactly how a child's social/interpersonal environment can positively or negatively influence brain development. Throughout the book, the authors highlight the interrelationship between neurobiology and psychology. They present basic information about brain development and organization, describe exactly what is going on inside the brain at each stage of development, and illustrate these concepts through a detailed case study of a preschooler with severe problems in communicating and relating. They discuss the pernicious effects that traumatic stress has on brain and behavior, differentiating between simple and complex PTSD, and review the specific brain impairments currently attributed to a childhood history of maltreatment. Using their unique psychobiological perspective and illustrative case studies, the authors evaluate the principles and strategies of treatment, showing how relationships and experiences can mitigate the effects of childhood trauma. After fleshing out the shocking cost to society of child maltreatment, the authors offer broad policy prescriptions that promote healthy development, including basic strategies for prevention and early intervention. *Psychological Trauma and the Developing Brain: Neurologically Based Interventions for Troubled Children* will show you how interpersonal experience shapes brain development, what is going on in the brain during the critical first six years, how therapeutic relationships and interpersonal experience can promote emotional and cognitive development, how childhood

maltreatment can damage the brain and impair the developing mind what types of experiences and therapeutic strategies can mitigate the effects of childhood trauma what policy prescriptions programs and early intervention strategies can be implemented to promote healthy development The Broadview Anthology of Expository Prose - Third Canadian Edition Laura Buzzard, Don LePan, Nora Ruddock, Alexandria Stuart, 2017-08-08 The third Canadian edition of this anthology has been substantially revised and updated for a contemporary audience a selection of classic essays from earlier eras has been retained but the emphasis is very much on twenty first century expository writing There is also a focus on issues of great importance in twenty first century Canada such as climate change the Truth and Reconciliation Commission the Jian Ghomeshi trial Facebook police discrimination trans rights and postsecondary education in the humanities Works of different lengths and levels of difficulty are represented as are narrative descriptive and persuasive essays and new to this edition lyric essays For the new edition there are also considerably more short pieces than ever before a number of op ed pieces are included as are pieces from blogs and from online news sources The representation of academic writing from several disciplines has been increased and in some cases the anthology also includes news reports presenting the results of academic research to a general audience Also new to this edition are essays from a wide range of the most celebrated prose writers of the modern era from Susan Sontag Eula Biss and Michel Foucault to Anne Carson and Ta Nehisi Coates The anthology also offers increased diversity of representation including for example a larger proportion of First Nations writers and women writers than previous Canadian editions Unobtrusive explanatory notes appear at the bottom of the page and each selection is preceded by a headnote that provides students with information regarding the context in which the piece was written Each reading is also followed by questions for discussion A unique feature is the inclusion of a set of additional notes on the anthology's companion website notes designed to be of particular help to EAL students and or students who have little familiarity with Canadian culture The anthology is accompanied by two companion websites The student website features additional readings and interactive writing exercises as well as the additional notes The instructor website provides additional discussion questions and for a number of the anthology selections background information that may be of interest

Drug Courts James L. Nolan, Drug courts offer offenders an intensive court based treatment program as an alternative to the normal adjudication process Begun in 1989 they have since spread dramatically throughout the United States In this interdisciplinary examination of the expanding movement a distinguished panel of legal practitioners and academics offers theoretical assessments and on site empirical analyses of the workings of various courts in the United States along with detailed comparisons and contrasts with related developments in Britain Practitioners politicians and academics alike acknowledge the profound impact drug courts have had on the American criminal justice system From a range of disciplinary perspectives contributors to this volume seek to make sense of this important judicial innovation While addressing a range of questions *Drug Courts* also aims to achieve a careful balance between focused empirical studies and broader theoretical analyses of the same phenomenon The volume maintains an analytical concentration on drug courts and on the important practical philosophical and jurisprudential consequences of this

unique form of therapeutic jurisprudence Drug courts depart from the practices and procedures of typical criminal courts Prosecutors and defense counsel play much reduced roles Often lawyers are not even present during regular drug court sessions Instead the main courtroom drama is between the judge and client both of whom speak openly and freely in the drug court setting Often accompanying the client is a treatment provider who advises the judge and reviews the client's progress in treatment Court sessions are characterized by expressive and sometimes tearful testimonies about the recovery process and are often punctuated with applause from those in attendance Taken together the chapters provide a variety of perspectives on drug courts and extend our knowledge of the birth and evolution of a new movement Drug Courts is an essential reference for courses in criminology the sociology of drugs and deviance and the philosophy of law and punishment

Medication Madness Peter R. Breggin, 2009-05-26 Medications for everything from depression and anxiety to ADHD and insomnia are being prescribed in alarming numbers across the country but the cure is often worse than the original problem Medication Madness is a fascinating frightening and dramatic look at the role that psychiatric medications have played in fifty cases of suicide murder and other violent criminal and bizarre behaviors As a psychiatrist who believes in holding people responsible for their conduct the weight of scientific evidence and years of clinical experience eventually convinced Dr Breggin that psychiatric drugs frequently cause individuals to lose their judgment and their ability to control their emotions and actions Medication Madness raises and examines the issues surrounding personal responsibility when behavior seems driven by drug induced adverse reactions and intoxication Dr Breggin personally evaluated the cases in the book in his role as a treating psychiatrist consultant or medical expert He interviewed survivors and witnesses and reviewed extensive medical occupational educational and police records The great majority of individuals lived exemplary lives and committed no criminal or bizarre actions prior to taking the psychiatric medications Medication Madness reads like a medical thriller true crime story and courtroom drama but it is firmly based in the latest scientific research and dozens of case studies The lives of the children and adults in these stories as well as the lives of their families and their victims were thrown into turmoil and sometimes destroyed by the unanticipated effects of psychiatric drugs In some cases our entire society was transformed by the tragic outcomes Many categories of psychiatric drugs can cause potentially horrendous reactions Prozac Paxil Zoloft Adderall Ritalin Concerta Xanax lithium Zyprexa and other psychiatric medications may spellbind patients into believing they are improved when too often they are becoming worse Psychiatric drugs drive some people into psychosis mania depression suicide agitation compulsive violence and loss of self control without the individuals realizing that their medications have deformed their way of thinking and feeling This book documents how the FDA the medical establishment and the pharmaceutical industry have over sold the value of psychiatric drugs It serves as a cautionary tale about our reliance on potentially dangerous psychoactive chemicals to relieve our emotional problems and provides a positive approach to taking personal charge of our lives

Darwin Day in America John G. West, 2014-04-22 At the dawn of the last century

leading scientists and politicians giddily predicted that science especially Darwinian biology would supply solutions to all the intractable problems of American society from crime to poverty to sexual maladjustment. Instead politics and culture were dehumanized as scientific experts began treating human beings as little more than animals or machines. In criminal justice these experts denied the existence of free will and proposed replacing punishment with invasive cures such as the lobotomy. In welfare they proposed eliminating the poor by sterilizing those deemed biologically unfit. In business they urged the selection of workers based on racist theories of human evolution and the development of advertising methods to more effectively manipulate consumer behavior. In sex education they advocated creating a new sexual morality based on normal mammalian behavior without regard to longstanding ethical and religious imperatives. Based on extensive research with primary sources and archival materials John G. West's captivating *Darwin Day in America* tells the story of how American public policy has been corrupted by scientific ideology. Marshaling fascinating anecdotes and damning quotations, West's narrative explores the far-reaching consequences for society when scientists and politicians deny the essential differences between human beings and the rest of nature. It also exposes the disastrous results that ensue when experts claiming to speak for science turn out to be wrong. West concludes with a powerful plea for the restoration of democratic accountability in an age of experts.

We Walk Amy S. F. Lutz, 2020-10-15 In this collection of beautiful and raw essays Amy S. F. Lutz writes openly about her experience, the positive and the negative, as a mother of a now twenty-one-year-old son with severe autism. Lutz's human emotion drives through each page and challenges commonly held ideas that define autism either as a disease or as neurodiversity. *We Walk* is inspired by her own questions: What is the place of intellectually and developmentally disabled people in society? What responsibilities do we as citizens and human beings have to one another? Who should decide for those who cannot decide for themselves? What is the meaning of religion to someone with no abstract language? Exploring these questions, *We Walk* directly and humanly examines social issues such as inclusion, religion, therapeutics, and friendship through the lens of severe autism. In a world where public perception of autism is largely shaped by the quirky geniuses featured on television shows like *The Big Bang Theory* and *The Good Doctor*, *We Walk* demands that we center our debates about this disorder on those who are most affected by its impacts.

No Child Left Different Sharna Olfman, 2006-01-30 A stellar group of authors from across disciplines explains the alarming increase in the use of psychotropic medications, questions the causes, and presents disturbing thoughts regarding this phenomenon and the risks it creates for children. They take an in-depth look at the conditions that have led to drugging our children and stress how emotional, social, cultural, and physical environments can both damage and heal young minds. And they challenge the model that maintains that psychological disturbance is genetic and thus requires medication. This is riveting reading for all who care about the youngest members of society. Over the past 15 years, there has been a 300 percent increase in the use of psychotropic medications with girls and boys under the age of 20, and prescriptions for preschoolers have skyrocketed. A stellar group of

authors from across disciplines explain this increase, question the causes and present disturbing thoughts regarding this phenomenon as they describe the risks it creates for children. While there are certainly extreme cases where drugs are the only option, medication rather than psychotherapy and counseling has become the first choice for treatment rather than a last resort. The experts who joined forces for this book take an in-depth look at the conditions that have led to drugging our children and stress how emotional, social, cultural, and physical environments can both damage and heal young minds. The so-called medical model, one maintaining that psychological disturbance is genetic and thus requires medication, is challenged in this volume. Contributors range from a pediatrician who has testified before Congress and been featured in a Time magazine cover story to a top child psychiatrist who is an official for the American Academy of Child and Adolescent Psychiatry, along with a well-known child psychiatrist, psychologists, environmentalists, and a public policy consultant. This is riveting reading for all who care about the youngest members of society. Among other issues, this work looks at controversy over whether psychiatric medications are safe or effective for children and what little we know about their effect on still-developing brains, as well as the role of corporate interests in the increased use of psychotropics for children. Chapters address the role of environment in both causing and curing disorders more and more often diagnosed in our youngsters, from ADHD, depression, and anxiety to eating disorders. The core questions addressed by this sage group of contributors are these: Why are so many children being diagnosed with psychiatric disturbances and given drugs? Why have drugs become the first treatment of choice to deal with those disorders?
