Managing Records as Evidence and Information Richard J. Cox, 2000-12-30 For the past three decades policies regarding a variety of information issues have emanated from federal agencies legislative chambers and corporate boardrooms Despite the focus on information policy it is still a relatively new concept and one only now beginning to be studied The subject area is wider than believed archives and records policies information resources management information technology telecommunications international communications privacy and confidentiality computer regulation and crime intellectual property and information systems and dissemination This is not a compendium of policies to be used but rather an exploration in a more detailed fashion of the fundamental principles supporting the setting of records policies Records policies are critically important for records professionals to develop and use as a means of strategically managing the information and evidence found in the millions of records created daily provided that the policies are based on comprehensible principles This is a series of discourses on the fundamentals of archives and records management needing to be understood before any organization attempts to define and set any policy affecting records and information The chapters concern defining records how information technology plays into policy compiling the fundamental tasks of identifying and maintaining records as critical to records and information policy public outreach and advocacy as a key objective for such policy and the role of educating records professionals in supporting sensible records policies

Value-Added Records Management Karen L. Sampson, 2002-10-30 Buried in paper As new technologies threats of litigation and the onslaught of e business innovations change the very nature of work organizations need ways to safely and properly manage information This revised and expanded edition of Sampson's earlier classic shows how records and information management practices jointly contribute to an organization's financial well being be it public or private non or for profit Recordkeeping practices affect business objectives processes functions and ultimately

everyone in the organization This book covers recordkeeping in all media including paper microfilm electronic and other storage modes Instead of focusing on records media and information technologies Sampson shows why organizations must focus on the content and value of records as they are determined by the organization s operating needs the government s requirements and relevant legislation She shows how to create an essential uniformity in records management one that integrates the many media systems you use into a single master system Also included is a cautionary section explaining why skillful records and information management is essential to safeguard an organization s legal rights This book provides fresh management perspectives and new business strategies showing how to cope with the growing dependence on electronic records

Records Classification: Concepts, Principles and Methods Umi Asma' Mokhtar,Zawiyah Mohammad Yusof,2017-05-19 Records Classification Concepts Principles and Methods Information Systems Context introduces classification an early part of the research lifecycle Classification ensures systematic organization of documents and facilitates information retrieval However classification systems are not prevalent in records management when compared to their use in other information fields This book views classification from the records management RM perspective by adopting a qualitative approach with case studies to gather data by means of interview and document content analysis Current development of information systems do not take into account the concept of classification from a RM perspective Such a model is required because the incorporation of information and communication technology ICT in managing records is inevitable The concept of classification from an RM perspective ought to be extended to the ICT team to enable the development of a RM system not limited to storage and retrieval functions but also with relation to disposal and preservation processes This proposed model introduces function based classification to ensure records are classified in context Gives a step by step functional model for constructing a classification system within an organization Advocates for the importance of practicing classification for records towards competent transparent and democratic organizations Helps organizations build their own classification system thus safeguarding information in a secure and systematic fashion Provides local case studies from Malaysia and puts together a generic globally applicable model
