College Student-Athletes Michael T. Miller, Daniel B. Kissinger, 2009-07-01
This volume is a critical and objective study of the contemporary college student athlete. Framed around the process of recruitment transition and support of student athletes in higher education the volume is a response to societal pressures to reform college athletics. Driven by publicity and the potential for revenue gains colleges and universities have invested heavily in developing athletic programs coaches and facilities. Yet few resources are invested strategically in the personal and intellectual development of student athletes. Written by a team of authors with first hand experience working with student athletes and transitional programs the volume argues that institutional attention must be directed at caring for the personal and intellectual growth of student athletes. Highlighting some best practice curricula and exploring the psychological issues surrounding participating in often highly competitive athletics the authors consistently conclude that institutional responsibility is of the utmost and immediate importance. Authors also consider the unique settings of student athletes in community and private liberal arts colleges demonstrating the broad interest in athletics and institutional competition. The result is an important volume that will be of interest to those who counsel and administer intercollegiate athletic programs faculty and researchers looking for insightful baseline data on the contemporary student athlete and those concerned with transitional programs and the future of higher education.

Handbook of Regression Modeling in People Analytics Keith McNulty, 2021-07-29
Despite the recent rapid growth in machine learning and predictive analytics many of the statistical questions that are faced by researchers and practitioners still involve explaining why something is happening. Regression analysis is the best swiss army knife we have for answering these kinds of questions. This book is a learning resource on inferential statistics and regression analysis. It teaches how to do a wide range of statistical analyses in both R and in Python ranging from simple hypothesis testing to advanced multivariate modelling. Although it is primarily focused on examples related to the analysis of people and talent the methods easily transfer to any discipline. The book hits a sweet spot where

there is just enough mathematical theory to support a strong understanding of the methods but with a step by step guide and easily reproducible examples and code so that the methods can be put into practice immediately This makes the book accessible to a wide readership from public and private sector analysts and practitioners to students and researchers Key Features 16 accompanying datasets across a wide range of contexts e g academic corporate sports marketing Clear step by step instructions on executing the analyses Clear guidance on how to interpret results Primary instruction in R but added sections for Python coders Discussion exercises and data exercises for each of the main chapters Final chapter of practice material and datasets ideal for class homework or project work *Sports in African American Life* Drew D.
