Practice **OECD Urban Studies The Circular Economy in Cities and Regions Synthesis Report** OECD,2020-10-28

Cities and regions play a fundamental role in the transition from a linear to a circular economy as they are responsible for key policies in local public services such as transport solid waste water and energy that affect citizens well being economic growth and environmental quality This synthesis report builds on the findings from 51 cities and regions contributing to the OECD Survey on the Circular Economy in Cities and Regions and on lessons learnt from the OECD Policy Dialogues on the circular economy carried out in Groningen Netherlands Ume Sweden Valladolid Spain and on going in Glasgow United Kingdom Granada Spain and Ireland Smart and Sustainable Planning for Cities and Regions Adriano Bisello,Daniele

Vettorato,Håvard Haarstad,Judith Borsboom-van Beurden,2021-03-22 This book offers a selection of research papers and case studies presented at the 3rd international conference Smart and Sustainable Planning for Cities and Regions held in December 2019 in Bolzano Italy and explores the concept of smart and sustainable planning including top contributions from academics policy makers consultants and other professionals Innovation processes such as co design and co creation help establish collaborations that engage with stakeholders in a trustworthy and transparent environment while answering the need for new value propositions The importance of an integrated holistic approach is widely recognized to break down silos in local government in particular when aimed at achieving a better integration of climate energy planning Despite the ongoing urbanization and polarization processes new synergies between urban and rural areas emerge linking development opportunities to intrinsic cultural natural and man made landscape values The increasing availability of big real time urban data and advanced ICT facilitates frequent assessment and continuous monitoring of performances while allowing fine tuning as needed This is valid not only for individual projects but also on a wider scale In addition and circling back to the first point big urban data and ICT can be of enormous help in facilitating engagement and co creation by raising awareness and by providing insight into the local consequences of specific plans However this potential is not yet fully exploited in standard processes and procedures which can therefore lack the agility and flexibility to keep up with the pulse of the city and dynamics of society The book provides a multi disciplinary outlook based on experience to orient the reader in the giant galaxy of smart and sustainable planning support the transposition of research into practice scale up visionary approaches and design groundbreaking planning policies and tools **Circular Economy for Buildings and Infrastructure** Jian

Zuo,Liyin Shen,Ruidong Chang,2024-05-03 This edited volume covers theoretical and practical aspects of circular economy in building development offering chapters dealing with topics such as material design affordability of housing development waste management and recycling smart metering and more A particular focus is placed on various stakeholders points of view The book s chapters are co developed and contributed by multidisciplinary teams including both academics and industry practitioners The case study oriented approach taken here helps to facilitate the reader s understanding of how building sustainability can be achieved in the context of circular economy The building industry has significant environmental social

and economic impacts As one of the biggest energy consumers and carbon emitters building sustainability has attracted wide attention globally Building projects and their associated activities consume a large amount of energy natural resources and water while producing a large proportion of wastes throughout their lifecycles The traditional linear approach of make use and dispose has been heavily criticized whilst the circular approach has gained momentum Indeed circular economy has emerged as one of key principles to manage sustainability related issues by means of focusing on the circularity of resources as well as the cost implications Global Urban Process Bimalendu Bhattacharya,2017-01-01 Urbanization man s best achievement forming a very small fraction of human history existence on this earth has gone through a series of transformations affected by various forces which are assessed in this book As the time gap in the succession of different phases of transformation has lessened the mid twentieth century marks a watershed in the course of urbanization both in its regional spread as well as in sharpening the urban divide propelled by changes on the political map of the world resulting from decolonization All these politico economic changes along with fast changing life style of people especially in the developing world open up new debates as we consider the urban future
