

Red Giants and White Dwarfs

- As a star begins to use up its hydrogen, it fuses helium atoms together into heavier atoms such as carbon.
- A blue giant star has exhausted its hydrogen fuel and is in a transitional phase.
- When the light elements are mostly used up, the star can no longer resist gravity and starts to collapse inward.
- The outer layers of the star grow outward and cool. The larger, cooler star turns red in color and so is called a Red Giant.

Advances in Observation and Theory M.A. Barstow, 2012-12-06 The European Workshop on White Dwarfs was initiated by Prof V Weidemann with the first meeting held in Kiel FRG in 1974 Since then a similar workshop has been held almost every two years Frascati 1976 Tel Aviv 1978 Paris 1981 Kiel 1984 Frascati 1986 and Toulouse 1990 Two major IAU colloquia have also been devoted to the study of white dwarfs No 53 Rochester NY 1979 No 114 Hanover NH 1988 Our most recent meeting the 8th Workshop marks a number of important advances in both observational and theoretical studies of white dwarfs This coincides with a significant expansion in the size of the community active in the field as was clear from an increase in the number of participants between this workshop 77 and that in Toulouse 46 just two years ago Key parts of any workshop are the discussion sessions following the papers However these are difficult to record and very often the live flavour of the debates is lost During this workshop we carried out an experiment recording the discussion sessions on video tape and then transcribing these later for the proceedings Although the recordings were made in non studio conditions with regard to lighting and noise only a very small part was unintelligible All participants were given an opportunity to check their questions and answers for scientific accuracy and to correct any errors arising in the transcription process
