Thomson, Brian S. (3-SFR)

The natural integral on the real line.

Sci. Math. Jpn. **67** (2008), no. 1, 23–35.

This essay is dedicated to Ralph Henstock (1923–2007) and his theory of integration. The author argues that a Riemann-type integral on the real line which was introduced by Henstock (and at the same time by Czech mathematician J. Kurzweil) and which covers the Lebesgue integral, is not just easier to present than the last one—it is easier to present than the Riemann integral. The name for this integral proposed in the title of the paper is considered by the author as a suitable brand in the mathematical market which could persuade the academic community to introduce this theory into the undergraduate curriculum.

The notions of the covering relations and the one of the integration basis introduced by the author of the paper are used to give an account of Henstock's ideas on the way to generalize his definition in a more abstract setting. A program for developing the integration theory is sketched.
