Revolution In Science 1500 1750:

The Revolution in Science 1500 - 1750 A.Rupert Hall,2014-07-10 The revolution in science of this book concerns the natural sciences that is knowledge of the external world which we now presume to exist independently of man The Revolution in Science, 1500-1750 Alfred Rupert Hall,1983 First Published in 1983 Routledge is an imprint of Taylor Francis an informa company The Structure of Scientific Revolutions Jo Hedesan,Joseph Tendler,2017-07-05 Thomas Kuhn s The Structure of Scientific Revolutions can be seen without exaggeration as a landmark text in intellectual history In his analysis of shifts in scientific thinking Kuhn questioned the prevailing view that science was an unbroken progression towards the truth Progress was actually made he argued via paradigm shifts meaning that evidence that existing scientific models are flawed slowly accumulates in the face at first of opposition and doubt until it finally results in a crisis that forces the development of a new model This development in turn produces a period of rapid change extraordinary science Kuhn terms it before an eventual return to normal science begins the process whereby the whole cycle eventually repeats itself This portrayal of science as the product of successive revolutions was the product of rigorous but imaginative critical thinking It was at odds with science s self image as a set of disciplines that constantly evolve and progress via the process of building on existing knowledge Kuhn s highly creative re imagining of that image has proved enduringly influential and is the direct product of the author s ability to produce a novel explanation for existing evidence and to redefine issues so as to see them in new ways *Society and Economy in Early Modern Europe, 1450-1789* Barry Taylor,1989 *The Scientific Revolution Revisited* Mikuláš Teich,2015-04-20 The Scientific Revolution Revisited brings Mikul Teich back to the great movement of thought and action that transformed European science and society in the seventeenth century Drawing on a lifetime of scholarly experience in six penetrating chapters Teich examines the ways of investigating and understanding nature that matured during the late Middle Ages and the Renaissance charting their progress towards science as we now know it and insisting on the essential interpenetration of such inquiry with its changing social environment The Scientific Revolution was marked by the global expansion of trade by European powers and by interstate rivalries for a stake in the developing world market in which advanced medieval China remarkably did not participate It is in the wake of these happenings in Teich s original retelling that the Thirty Years War and the Scientific Revolution emerge as products of and factors in an uneven transition in European and world history from natural philosophy to modern science feudalism to capitalism the late medieval to the early modern period With a narrative that moves from pre classical thought to the European institutionalisation of science and a scope that embraces figures both lionised and neglected such as Nicole Oresme Francis Bacon Thomas Hobbes Isaac Newton Ren Descartes Thaddeus Hagecius Johann Joachim Becher The Scientific Revolution Revisited illuminates the social and intellectual sea changes that shaped the modern world An Analysis of Thomas Kuhn's The Structure of Scientific Revolutions Jo Hedesan,Joseph Tendler,2017-07-05 Thomas Kuhn s The Structure of Scientific Revolutions can be

seen without exaggeration as a landmark text in intellectual history In his analysis of shifts in scientific thinking Kuhn questioned the prevailing view that science was an unbroken progression towards the truth Progress was actually made he argued via paradigm shifts meaning that evidence that existing scientific models are flawed slowly accumulates in the face at first of opposition and doubt until it finally results in a crisis that forces the development of a new model This development in turn produces a period of rapid change extraordinary science Kuhn terms it before an eventual return to normal science begins the process whereby the whole cycle eventually repeats itself This portrayal of science as the product of successive revolutions was the product of rigorous but imaginative critical thinking It was at odds with science s self image as a set of disciplines that constantly evolve and progress via the process of building on existing knowledge Kuhn s highly creative reimagining of that image has proved enduringly influential and is the direct product of the author s ability to produce a novel explanation for existing evidence and to redefine issues so as to see them in new ways

Early Modern Color Worlds

,2016-09-07 Color has recently become the focus of scholarly discussion in many fields but the categories of art craft science and technology unreflectively defined according to modern disciplines have not been helpful in understanding color in the early modern period Color worlds consisting of practices concepts and objects form the central category of analysis in this volume The essays examine a rich variety of color worlds and their constituent engagements with materials productions and the ordering and conceptualization of color Many color worlds appear to have intersected and cross fertilized at the beginning of the seventeenth century the essays focus especially on the creation of color languages and boundary objects to communicate across color worlds or indeed when and why this failed to happen Contributors include Tawrin Baker Barbara H Berrie Fokko Jan Dijksterhuis Karin Leonhard Andrew Morrall Doris Oltrogge Valentina Pugliano Anna Marie Roos Romana Sammern Filzmoser and Simon Werrett

The Anatomical Renaissance

Andrew Cunningham,2016-12-05 The central proposition of this book is that the great anatomists of the Renaissance from Vesalius to Fabricius and Harvey the forebears of modern scientific biology and medicine consciously resurrected not merely the methods but also the research projects of Aristotle and other Ancients The Moderns choice of topics and subjects their aims and their evaluation of their investigations were all made in a spirit of emulation not rejection of their distant predecessors First published in 1997 Andrew Cunningham s masterly analysis of the history of the scientific renaissance a history not of things found but of projects of enquiry provoked a reappraisal of the intellectual roots of the Renaissance as well as illuminating debates on the history of the body and its images

Italy in the Seventeenth Century

Domenico Sella,2014-06-17 In his comprehensive overview of 17th century Italy Professor Sella challenges the old view that Italy was in general decline instead he shows it to have been a time of sharp contrasts and shifts in fortune He starts with a balanced and critical analysis of political developments placing the Italian states in their wider European context before assessing the state of the economy He then looks in depth at society religion and culture and science and in particular reassesses the influence of the Counter Reformation on Italian life His book

ends with an engrossing account of the life and work of Galileo as well as an overview of the important and often neglected contributions made by other scientists in the later part of the century This rich and balanced volume is an ideal introduction to early modern Italy and provides a critical revaluation of a much misunderstood period in the country's history

Scientific Method Barry Gower, 2012-10-12 The central theme running throughout this outstanding new survey is the nature of the philosophical debate created by modern science's foundation in experimental and mathematical method More recently recognition that reasoning in science is probabilistic generated intense debate about whether and how it should be constrained so as to ensure the practical certainty of the conclusions drawn These debates brought to light issues of a philosophical nature which form the core of many scientific controversies today Scientific Method A Historical and Philosophical Introduction presents these debates through clear and comparative discussion of key figures in the history of science Key chapters critically discuss Galileo's demonstrative method Bacon's inductive method and Newton's rules of reasoning the rise of probabilistic Bayesian methods in the eighteenth century the method of hypotheses through the work of Herschel Mill and Whewell the conventionalist views of Poincaré and Duhem the inductivism of Peirce Russell and Keynes Popper's falsification compared with Reichenbach's enumerative induction Carnap's scientific method as Bayesian reasoning The debates are brought up to date in the final chapters by considering the ways in which ideas about method in the physical and biological sciences have affected thinking about method in the social sciences This debate is analyzed through the ideas of key theorists such as Kuhn Lakatos and Feyerabend
