Sex Traps:

Insect Sex Pheromones Martin Jacobson, 2012-12-02 *Insect Sex Pheromones* is a revised and expanded edition of the book *Insect Sex Attractants* and covers greater discoveries in the field of sex pheromones. It is discovered that many sex pheromones are sexually excitatory rather than attractive. This discovery prompted the substitution of the more accurate and encompassing term pheromones for the term attractants in the title of this edition. Composed of 13 chapters, this book has chapters that cover the occurrence in female and production in male of sex pheromones in various insect species. The insect orders considered include Acarina, Orthoptera, Hemiptera, Homoptera, Diptera, Isoptera, Neuroptera, Siphonaptera, Coleoptera, Hymenoptera, Lepidoptera, Trichoptera, and Mecoptera. The following chapter discusses pheromones produced by one sex that lure to assemble for mating. This book goes on discussing the anatomy and physiology of scent glands of male and female insects, the attractant perception mechanism, and the behavioral and electrophysiological responses of insects to sex pheromones. Other chapters are devoted to the influence of several factors on the presence of chemical sex attraction or excitation in any insect. The concluding chapters deal with the collection, isolation, identification, synthesis, and analysis of sex pheromones. This book will greatly appeal to research and economic entomologists, insect physiologists, chemists, and ecologists.

Soybean and food items derived from it form dietary components of numerous people, especially those living in the Orient. The health benefits of soybean have attracted the attention of nutritionists as well as common people.

Trap Responses of Flying Insects R. C.

Muirhead-Thompson,2012-12-02 Insect trapping is a basic field research tool for many biologists whether they are studying insect pests disease vectors or insect ecology for its own sake Any field entomologist contemplating a new insect trapping program or looking to improve or develop an existing scheme will benefit from this broad review of flying insect traps in which the author draws on a wide variety of methods used by different research projects from all over the world Over the years a great many traps have been developed and endlessly modified to suit particular species habitats and research requirements In virtually every case the design of the trap interacts with the specific behavior of the insects involved to bias trap efficiency In addition the limited dialogue between workers in different subject disciplines and habitats has caused a shortage of new information available to field entomologists as a whole Describes and evaluates the main methods of trapping flying insects Brings together results from agricultural forest pest studies and those from medical entomology
