Ansorg, Angelo Bolzern, Holger Frick, Anne-Sarah Ganske, Ambros Hänggi, Christian Kropf, Anna Stäubli, 2022-04-07 All You Need to Know About Spiders Spiders are super predators and devour everything they can overpower To do this they have developed incredibly good catching techniques and with spider silk a tool that makes material technology green with envy The males are usually smaller than the females and in order to have sex they have to come up with a lot to avoid being misunderstood as easy prey Dancing drumming and gifts almost always help Spiders use their venom in very precise doses and since humans are not on their menu they are harmless to us Many people s unnecessary fear of spiders finds cultural roots as early as the Middle Ages Nevertheless spider fear is easily treatable There is no habitat or building without spiders And that s a good thing because spiders have fascinating properties and their world is full of surprises Everything you need to know about them is explained in this book in understandable language by experts for laymen In addition some of the most common spider species in the house and garden are briefly presented with tips for observation The authors This book is authored by eight scientists all of them members of the Association for the Promotion of Spider Research Wolfgang Nentwig Jutta Ansorg Angelo Bolzern Holger Frick Anne Sarah Ganske Ambros H nggi Christin Kropf und Anna St ubli **Spider Behaviour** Marie Elisabeth Herberstein, 2011-01-27 Spiders are often underestimated as suitable behavioural models because of the general belief that due to their small brains their behaviour is innate and mostly invariable Challenging this assumption this fascinating book shows that rather than having a limited behavioural repertoire spiders show surprising cognitive abilities changing their behaviour to suit their situational needs The team of authors unravels the considerable intra specific as well as intra individual variability and plasticity in different behaviours ranging from foraging and web building to communication and courtship An introductory chapter on spider biology systematics and evolution provides the reader with the necessary background information to understand the discussed behaviours and helps to place them into an evolutionary context Highlighting an under explored area of behaviour this book will provide new ideas for behavioural researchers and students unfamiliar with spiders as well as a valuable resource for those already working in this intriguing field *Sperm Competition and Sexual Selection* Tim R. Birkhead, Anders Pape Møller, 1998-08-12 Sperm Competition and Sexual Selection presents the intricate ways in which sperm compete to fertilize eggs and how this has prompted reinterpretations of breeding behavior This book provides a theoretical framework for the study of sperm competition which is a central part of sexual selection It also discusses the roles of females and the relationships between paternal care in sperm competition The chapters focusing on taxonomic development are diverse and cover all the major animal groups both vertebrate and invertebrate and plants The final chapter provides an overview discussing the relationship between sperm competition and sexual selection in terms of both function and mechanism and how these translate into species fitness This book will be of prime interest to behaviorists ecologists and evolutionary biologists suggesting new avenues of research and new ways of approaching old problems The only up to date summary of a central and popular subject Well known editors and authors

Provides a theoretical framework for the study of sperm competition Covers all major animal groups Includes a chapter on plants

**Sexual Selection** Regina H. Macedo, Glauco Machado, 2013-09-25 Sexual Selection Perspectives and Models from the Neotropics presents new sexual selection research based upon neotropical species As neotropical regions are destroyed at an alarming rate with an estimated 140 species of rainforest plants and animals going extinct every day it is important to bring neotropical research to the fore now Sexual selection occurs when the male or female of a species is attracted by certain characteristics such as form color or behavior When those features lead to a greater probability of successful mating they become more prominent in the species Although most theoretical concepts concerning sexual selection and reproductive strategies are based upon North American and European fauna the Neotropical region encompasses much more biodiversity with as many as 15 000 plant and animal species in a single acre of rain forest This book illustrates concepts in sexual selection through themes ranging from female cryptic choice in insects sexual conflict in fish interaction between sexual selection and the immune system nuptial gifts visual and acoustic sexual signaling parental investment to alternative mating strategies among others These approaches distinguish Sexual Selection from current publications in sexual selection mainly because of the latitudinal and taxonomic focus so that readers will be introduced to systems mostly unknown outside the tropics several of which bring into question some well established patterns for temperate regions Synthesizes sexual selection research on species from the Neotropics Combines different perspectives and levels of analysis using a broad taxonomic basis introducing readers to systems mostly unknown outside the tropics and bringing into question well established patterns for temperate regions Includes contributions exploring concepts and theory as well as discussions on a variety of Neotropical vertebrates and invertebrates such as insects fish arthropods and birds
