**Sexuality and Medicine** E.E. Shelp, 2012-12-06 When confronted by the concerns of human sexual function or dysfunction American medicine finds itself well impaled on the horns of a dilemma Currently it is acceptable medical practice to treat sexual dysfunctions disorders or dissatisfactions that arise from psychogenic etiologies endocrine imbalances neurologic defects or are side effects of necessary medication regimes In addition implantation of penile prostheses in cases of organic impotence is an increasingly popular surgical procedure These clinical approaches to sexual inadequacies accepted by medicine since 1970 represent one horn of the dilemma The opposite horn pictures the medical profession firmly backed into a corner by cultural influences For example when hospital admissions occur a significant portion of the routine medical history is the section on system review A few questions are asked about the cardio respiratory the genitourinary and the gastrointestinal systems But in a preponderance of hospitals no questions are permitted or if raised answers are not recorded about human sexual functioning Physicians tend to forget that they are victims of cultural imposition first and of professional training a distant second

The Body in Medical Thought and Practice D. Leder, 2013-06-29 In the second half of the 20th century the body has become a central theme of intellectual debate How should we perceive the human body Is it best understood biologically experientially culturally How do social institutions exercise power over the body and determine norms of health and behavior The answers arrived at by phenomenologists social theorists and feminists have radically challenged our conventional notions of the body dating back to 17th century Cartesian thought This is the first volume to systematically explore the range of contemporary thought concerning the body and draw out its crucial implications for medicine Its authors suggest that many of the problems often found in modern medicine dehumanized treatment overspecialization neglect of the mind's healing resources are directly traceable to medicine's outmoded concepts of the body New and exciting alternatives are proposed by some of the foremost physicians and philosophers working in the medical humanities today

The Philosophy of Sex Raja Halwani, Jacob M. Held, Natasha McKeever, Alan Soble, 2022-02-28 With twenty five essays seven of which are new to the eighth edition this best selling volume examines the nature morality and social meanings of contemporary sexual phenomena Topics include sexual desire and activity masturbation Sexual orientation asexuality transgender issues Zoophilia rape casual sex and promiscuity love and sex polyamory sexual consent sexual perversion sexual ethics objectification BDSM sex and technology sex and race and sex work Updated and new discussion questions offer students starting points for debate in both the classroom and the bedroom

The Codification of Medical Morality R.B. Baker, 2007-08-26 Like many novel ideas the idea for this volume and its predecessor arose over lunch in the cafeteria of the old Wellcome Institute On an afternoon in September 1988 Dorothy and Roy Porter and I sketched out a plan for a set of conferences in which scholars from a variety of

disciplines would explore the emergence of modern medical ethics in the English speaking world from its pre history in the quarrels that arose as gentlemanly codes of etiquette and honor broke down under the pressure of the eighteenth century sick trade to the Enlightenment ethics of John Gregory and Thomas Percival to the American appropriation process that culminated in the American Medical Association's 1847 Code of Ethics and to the British turn to medical jurisprudence in the 1858 Medical Act Roy Porter formally presented our idea as a plan for two back to back conferences to the Wellcome Trust and I presented it to the editors of the PHILOSOPHY AND MEDICINE series H Tristram Engelhardt Jr and Stuart Spicker The reception from both parties was enthusiastic and so with the financial backing of the former and a commitment to publication from the latter Roy Porter ably assisted by Frieda Hauser and Steven Emberton organized two conferences The first was held at the Wellcome Institute in September 1989 the second was sponsored by the Wellcome but was actually held in the National Hospital in December 1990 Ethical Dimensions of Geriatric Care S.F. Spicker, S.R. Ingman, Ian Lawson, 1987-10-31 There is both a timeliness and a transcendent rightness in the fact that scholars clinicians and health professionals are beginning to examine the ethics based components of decision making in health care of the elderly Ethics as the discipline concerned with right or wrong conduct and moral duty pervades hospital rooms nursing home corridors physicians offices and the halls of Congress as decisions are made that concern the allocation of health related services to individuals and groups in need In particular care of older persons recently has received disproportionate attention in discussions of ethics and clinical care Age alone of course should not generate special focus on ill individuals about whom concerns arise based on value conflicts tacitly involved in the delivery of health care Having said that age is not the principal criterion for attention to ethics based concerns in health care it must be acknowledged that old people have a high prevalence of conditions that provoke interest and put them in harms way if value conflicts are not identified and seriously addressed Issues that concern autonomy the allocation of scarce resources inter generational competition and conflict the withholding of treatment in treatable disease and substitute and proxy decision making for the cognitively impaired all have special relevance for older persons

**Infertility** Kevin Wm. Wildes, 1996-12-31 Infertility A Crossroad of Faith Medicine and Technology brings together a diverse group of clinicians theologians and philosophers to examine the use of reproductive technologies in the light of the Roman Catholic moral tradition and recent teaching The book provides relevant background information e.g. Donum Vitae from the Congregation for the Doctrine of the Faith as it explores the psychological social legal and moral contexts of reproductive medicine This book is Volume 3 of Catholic Studies in Bioethics in the series Philosophy and Medicine

**Rights to Health Care** Thomas J. Bole III, W.B. Bondeson, 2007-08-23 Human existence is marked by pain limitation disability disease suffering and death These facts of life and of death give ample grounds for characterizing much of the human condition as unfortunate A core philosophical question is whether the circumstances are in addition unfair or unjust in the sense of justifying claims on the resources time and abilities of others The temptation to use the languages of rights and

of justice is und standable Faced with pain disability and death it seems natural to complain that someone should do something this is unfair or it just isn t fight that people should suffer this way Yet it is one thing to complain about the unfairness of another s actions and another thing to complain about the unfairness of biological or physical processes If no one is to blame for one s illness disability or death in what sense are one s unfortunate circumstances unfair or unjust How can claims against others for aid and support arise if no one has caused the unfortunate state of affairs To justify the languages of fights to health care or justice in health care requires showing why particular unfortunate circumstances are also unfair in the sense of demanding the labors of others It requires understanding as well the limits of property claims After all claims regarding justice in health care or about fights to health care limit the property fights of those whose resources will be used to provide care

**Competency** Mary Ann Gardell Cutter,E.E. Shelp,2012-12-06 Some conferences produce proceedings others an inspiration to labor which finally leads to a published work Such has been the case with regard to this volume In 1984 the Center for Ethics Medicine and Public Issues held a conference with the title When are Competent Patients Incompetent with the support of the Texas Committee for the Humanities a state based program of the National Endowment for the Humanities Assistance was provided by both Baylor College of Medicine and the Institute of Religion This conference evoked a considerable interest in examining further the moral status of competency determinations in the clinical setting This interest is realized in this volume which now affords us an opportunity to thank all those individuals who made the conference possible only some of whom are acknowledged in this Preface In particular we wish to express our gratitude to Baruch A Brody Rebecca Dresser the Honorable Jerome Jones H Steven Moffic Margery W Shaw Eleanor Tinsley and Albert Van Heiden The volume took its shape through the labors of Earl Shelp and Mary Ann Gardell Cutter who inspired the further evolution of the papers presented at the conference and attracted contributions from individuals who had not attended Earl Shelp and Mary Ann Gardell Cutter have produced a volume following extensive reflection and dialogue they were ably assisted in the final preparation of the manu script by Thomas J Bole III and George Khushf to whom special thanks are due

**Germ-Line Intervention and Our Responsibilities to Future Generations** Emmanuel Agius,S. Busuttill,2012-12-06 In contemporary ethical discussion widespread concern about the potential risks of genetic engineering is raising new and fundamental questions about our responsibilities towards unborn generations Newly acquired knowledge in genetic engineering techniques has brought about not only potential benefits but also immense risks for the well being of both present and future generations This book raises a number of ethical issues concerning the impact of genetic engineering on generations yet to be born The four topical areas that constitute the focus of the volume namely 1 from laboratory to germ line therapy 2 the concept of human nature theological and secular perspectives 3 genetic intervention and the common heritage view and 4 social responsibilities of geneticists towards future generations raise intriguing ethical and legal questions as well as important policy issues As much as any set of issues they reflect the hopes and fears prejudices

and uncertainties that people associate with germ line intervention and the future of human kind

**Japanese and Western Bioethics** K. Hoshino, 2013-04-17 The editors of the Philosophy and Medicine series recognize with gratitude the foresight, understanding, hard labor and patience of Prof Kazumasa Hoshino. It is his perseverance that has made this volume a reality. It was his faith in ideas that brought together a cluster of scholars in Tokyo on September 24, 1994 at Sophia University for a U S J apan Bioethics Congress. With the support of the Foundation for Advancement of International Science, the Japan Foundation, Center for Global Partnership, the Foundation of Thanatology, the Japanese Center for Quality of Life Studies and Sophia University, scholars from Canada, Germany, Japan and the United States were able to explore the differences and similarities in their approaches to bioethics and health care policy. That conference first produced a volume through Shibunkaku Publishers of Kyoto that appeared in 1995 in Japanese, *The Dignity of Death*, edited by Kazumasa Hoshino. Selections from those materials have been reworked for an English audience and now appear along with new essays in this volume. The field of comparative bioethics is only in its infancy. We are deeply grateful to Prof Kazumasa Hoshino, one of the fathers of Japanese bioethics, for having made this volume possible.

**On the Nature of Health** L.Y. Nordenfelt, 2012-12-06 **GENERAL INTRODUCTION** This study of the concept of health is an attempt to combine central ideas in modern philosophy of medicine with certain results from analytical action theory. What emerges from the study is a concept of health based on an action theoretic foundation. A person's health is characterized as his ability to achieve his vital goals. The general conception is not new. This study has been inspired by a number of scholars, both ancient and modern. The most important influences from the latter have been those of Georges Canguilhem, H. Tristram Engelhardt Jr, Caroline Whitbeck and Ingmar Pern. The novel aspect of this book consists of elaborations made to the general conception. First, the action theoretic platform is analysed in some detail. The nature of the ability involved, as well as the conditions for having that ability, are specified. Second, the vital goals of man are given considerable attention. Some previous attempts to define such vital goals are analysed and criticized. A new characterization is proposed in which the vital goals are conceptually linked to the notion of happiness. A person's vital goals are such states of affairs as are necessary and together sufficient for his minimal happiness. Third, a number of consequences of this conception are observed and analysed. One issue, which is particularly emphasized, is that of whether the concept of health is a theoretical or a normative concept.

**Ownership of the Human Body** H.A. Ten Have, J.W. Welie, 2013-11-11 This is the first book in healthcare ethics addressing the moral issues regarding ownership of the human body. Modern medicine increasingly transforms the body and makes use of body parts for diagnostic, therapeutic and preventive purposes. The book analyzes the concept of body ownership. It also reviews the ownership issues arising in clinical care, for example, donation policies, autopsy and biomedical research. Societies and

legal systems also have to deal with issues of body ownership A comparison is made between specific legal arrangements in The Netherlands and France as examples of legal approaches In the final section of the book different theoretical perspectives on the human body are analyzed libertarian personalist deontological and utilitarian theories of body ownership

Death: Beyond Whole-Brain Criteria Richard M. Zaner, 1988 Based on a symposium held on Oct 18 20 1984 at Vanderbilt University in Nashville Tenn *The Use of Human Beings in Research* S.F. Spicker, Ilai Alon, A. de Vries, H. Tristram Engelhardt Jr., 1988-05-31 This volume which has developed from the Fourteenth Trans Disciplinary Symposium on Philosophy and Medicine September 5 8 1982 at Tel Aviv University Israel contains the contributions of a group of distinguished scholars who together examine the ethical issues raised by the advance of biomedical science and technology We are of course still at the beginning of a revolution in our understanding of human biology scientific medicine and clinical research are scarcely one hundred years old Both the sciences and the technology of medicine until ten or fifteen years ago had the feeling of the 19th century about them we sense that they belonged to an older time that era is ending The next twenty five to fifty years of investigative work belong to neurobiology genetics and reproductive biology The technologies of information processing and imaging will make diagnosis and treatment almost incomprehensible by my generation of physicians Our science and technology will become so powerful that we shall require all of the art and wisdom we can muster to be sure that they remain dedicated as Francis Bacon hoped four centuries ago to the uses of life It is well that as philosophers and physicians we grapple with the issues now when they are relatively simple and while the pace of change is relatively slow We require a strategy for the future that strategy must be worked out by scientists philosophers physicians lawyers theologians and I should like to add artists and poets **Children and Health Care** L.M. Kopelman, J.C. Moskop, 2007-08-26 Before a separate Department of Medical Humanities was formed the editors of this volume were faculty members of the Department of Pediatrics at our medical school Colleagues daily spoke of the moral and social problems of children s health care Our offices were near the examining rooms where children had their bone marrow procedures done Since this is a painful test we often heard them cry The hospital floor where the sickest children stayed was also nearby The physicians nurses and social workers believed that children s health care needs were not being met and that more could and should be done Fewer resources are available for a child than for an adult with a comparable illness they said These experiences prompted us to prepare this volume and to ask whether children do get their fair share of the health care dollar Since the question What kind of health care do we owe to our children is complex responses should be rooted in many disciplines These include philosophy law public policy and of course the health professions Representing all of these disciplines contributors to this volume reflect on moral and social issues in children s health care The last hundred years have brought great changes in health care for children The specialty of pediatrics developed during this period and with it a new group of advocates for children s health care Women s suffrage gave a political boost to the recognition of children s

special health needs

**The Science/Fiction of Sex** Annie Potts, 2014-02-25 What can we learn from exploring the differences in male and female orgasmic experience Is the penis an entity with a mind of its own These issues and others such as the popular portrayals of male sexuality as active and outwardly focused and female sexuality as passive and internally located are discussed in *The Science Fiction of Sex* Contemporary feminist and poststructuralist theories of sex and gender are explored alongside an investigation of how people make sense of such concepts as heterosexuality orgasm sexual dysfunction femininity and masculinity and safer sex practice Potts asks men and women about their actual experiences of heterosex This interview material combined with excerpts from sexological and medical texts and features from film and television draws attention to the ways in which western cultural constructs influence our ideas and experiences of the body sex and gender Potts also uses deconstructive theory as a textual tool concentrating on how binary oppositions such as inside outside and mind body impact on our understandings of heterosex and affect the power relations between women and men She also examines how the radical postmodern theories of the body and sexuality proposed by Irigaray Lyotard and Deleuze and Guattari disrupt such dualistic modes of understanding and experiencing sexualized bodies *The Science Fiction of Sex* will be of interest to those studying women and psychology as well as gender studies cultural studies feminist studies sociology philosophy public health and education

**The Physician as Captain of the Ship** N.M. King, L.R. Churchill, Alan W. Cross, 2007-08-19 The fixed person for fixed duties who in older societies was such a godsend in the future will be a public danger Twenty years ago a single legal metaphor accurately captured the role that American society accorded to physicians The physician was captain of the ship Physicians were in charge of the clinic the Operating room and the health care team responsible and held accountable for all that happened within the scope of their supervision This grant of responsibility carried with it a corresponding grant of authority like the ship's captain the physician was answerable to no one regarding the practice of his art However compelling the metaphor few would disagree that the mandate accorded to the medical profession by society is changing As a result of pressures from a number of diverse directions including technological advances the development of new health professionals changes in health care financing and delivery the recent emphasis on consumer choice and patients rights what our society expects physicians to do and to be is different now The purpose of this volume is to examine and evaluate the conceptual foundations and the moral implications of that difference Each of the twelve essays of this volume assesses the current and future validity of the captain of the ship metaphor from a different perspective The essays are grouped into four sections In Section I Russell Maulitz explores the physician's role historically
