Singapore, the Energy Economy Weng Hoong Ng, 2013-05-24 Singapore might not have survived the 1960s and prospered thereafter had it not built its economy on the foundations of oil refining trading and support for oil and gas exploration and production Cheap oil sound policies and strong government combined to produce the Singapore economic miracle in its first 50 years of self rule independence With the end of cheap oil how will Singapore fare and what is the relevance of its model of development for other countries Singapore s successful launch coincided with a golden period of cheap energy and a pro globalization and free trade environment These three elements are now under threat from rising energy prices and the global financial crisis which started in 2007 that will leave a lasting impact on the world s political and economic landscape If the Singapore model is reaching or has reached its peak what could take its place This book poses questions for not just for Singapore planners but also for anyone interested in modern economics and trade beyond the current era The book also looks into the numerous subsectors within Singapore s broad energy sector and examines the energy sector s links with the other pillars of its economy trade financial offshore marine operations manufacturing and transportation It considers possible threats and challenges Singapore s rising energy intensity its vulnerability to energy supply cut offs the likely impact of peak oil terrorism and environmental climate issues It also looks at China s growing investment and role in Singapore s oil and gas industry The book is a must read for an excellent insight into Singapore s energy economy filled with data information interviews and analyses previously not available to the

Fully indexed. The 1991 edition of the Yearbook is the single most current comprehensive and authoritative reference publication about the work of the United Nations, other international organizations, and related bodies. Managing Global Risks in the Urban Age Yee-Kuang Heng, 2016-03-03. The first full-length exposition of what it terms a global city global risks nexus, this volume crosses disciplinary boundaries to draw upon research from Security Studies, Geography, Sociology, and Urban Studies. Innovative in its approach, integrating theories about Global Cities with those positing a Global Risk Society, Yee Kuang Heng positions this research in the midst of two concurrent global trends that will gain more significance in coming years. The world is experiencing the consequences of not only rapid globalisation but also urbanization. In 2008, the UN declared that more than half the world's population was now urban. At the same time, highly connected global cities like New York, London, Tokyo, and Singapore also face rapidly spreading global risks such as pandemics and financial crises. Unique in developing a typology of global risks that threaten a global city like Singapore, beyond its Asian focus, the book also draws out thematic and policy lessons pertinent to other global cities. Global cities do not simply materialize. They are dependent on a range of stakeholders at various levels that produce and reproduce their command and control capabilities in the face of global risks. Singapore's experiences managing global risks in the financial, aviation, and maritime domains are common concerns shared by many countries and cities that have or aspire to develop similar critical infrastructure.
