Shaft Fractures and Pseudarthroses Bruce M. Cameron,1966 **Transosseous Osteosynthesis** Gavriil A.

Ilizarov,2012-12-06 This volume deals with the transosseous external fixation techniques that I have been developing over the course of the past 40 years During this time our research in medicine biology and engineering has led to the evolution of more than 800 unique highly effective methods of treatment that extend beyond the realm of traumatology and orthopedics The book features a comprehensive theoretical and clinical description of the biologic laws governing the dependence of the shape forming processes of bones and joints upon the adequacy of blood supply as well as a delineation of the effect of tension stress upon the genesis and growth of tissues I have included our latest data on tissue growth and regeneration during transosseous osteosyntheses The book summarizes the biomechanical principles of application of my apparatus clinical cases selected from more than 25000 patients illustrate the management of some of the most complex disorders of the locomotor system New solutions to many therapeutic problems are described In particular severe limb trauma with large defects of bone vessels nerves and skin can be managed without resort to transplantation Radical debridement surgery can be followed by a one step restoration of the missing tissue thus decreasing the likelihood of a serious wound infection or an amputation **Pseudarthrosis of the Long Bones** Otto Verbeek,1962 **Treatment of Fractures in Children and Adolescents** B.G. There are many textbooks on fractures in adults but few deal with those in children and young persons Publications on fractures in children are usually written by orthopedic surgeons who are familiar with the problems presented by the growing skeleton The principles taught in the best known works on fractures in children by BLOUNT 1954 RETTIG 1957 CHIGOT and ESTEVE 1957 EHALT 1960 POLLEN 1973 and RANG 1974 differ from each other only slightly The controversy which has surrounded the treatment of fractures in adults in recent years has never extended to childrens fractures Skillful nonoperative treatment of the latter leads to uneventful healing in the majority of cases which cannot always be said of similar injuries in adults Considerable skill is required to induce nonunion in a child and its occurrence always results from a serious error of management In the adult prolonged immobilization frequently leads to muscle atrophy joint stiffness and disturbances of the peripheral innervation and circulation Fracture treatment by internal fixation in the manner originally described by LANE 1894 LAMBOTTE 1892 1907 1913 KONIG 1905 1931 and DANIS 1932 1949 has gained wide acceptance only in the last 15 years Since 1958 MULLER ALLGOWER WIL LENEGGER and the other members of the Swiss Association for the Study of Internal Fixation ASIF have been developing techniques and instruments for the operative treatment of fractures *Cumulated Index Medicus* ,1972
