Models Of Cognitive Aging:

Models of Cognitive Aging Timothy J. Perfect, Elizabeth A. Maylor, 2000 This book offers an updated account of the latest methodological and theoretical issues in cognitive aging Part of the Debates in Psychology series it presents the arguments surrounding the currently controversial questions in cognitive aging What is the appropriate methodology for understanding cognitive change How many factors are necessary to understand the patterns of age related change What might these factors be The topics and arguments explored in a series of chapters by the leading researchers in the field and together they cover a broad range of cognitive functions including language use cognitive slowing and memory loss Animal Models of Human

Cognitive Aging Jennifer L. Bizon, Alisa Woods, 2008-11-12 Significant improvements in lifestyle and medical science are leading to an ever increasing elderly population in the United States and other developed nations The U S census bureau estimates that the number of people over 65 will nearly double by 2030 and that the elderly will comprise nearly one fifth of the world s entire population within the next 20 years In Animal Models of Human Cognitive Aging Jennifer Bizon Alisa Woods and a panel of international authorities comprehensively discuss the use of animal models as a tool for understanding cognitive changes associated with the aging process The book provides substantive background on the newest and most widely used animal models in studies of cognition and aging while detailing the normal and pathological processes of brain aging of humans in relation to those models Additional chapters comprehensively review frontal cortical deficits and executive function in primates as related to humans and the use of transgenic modulation in mice to model Alzheimer s and other age related diseases Groundbreaking and authoritative Animal Models of Human Cognitive Aging provides a valuable resource for Neuroscientists Gerontological Scientists and all aging medicine researchers while serving as a primer for understanding current brain aging studies **Biology of Cognitive Aging: Model Systems, Technologies and beyond**

Shin Murakami, 2017-04-13 Welcome We humans tend to experience forgetfulness when we get old The forgetfulness may become more serious memory impairment dementia Presumably we have known it for a long time but we still do not know the mechanism behind A normal part of forgetfulness is called age related memory impairment AMI which is considered the first step towards mild cognitive impairment MCI transition state and dementia disease state The majority of dementia is attributable to Alzheimer s disease AD Progression to dementia occurs at a high rate in patients with AMI This eBook covers exciting but yet challenging field of cognitive aging AMI is specific to neural tissues of the brain and is considered to be segmental aging It happens not only to humans but also to a variety of species Learning and memory are vulnerable to aging in a wide variety of model species including worms fruit flies insects snails fishes and rodents Aging specifically reduces the ability to learn new information but leaves old memories and procedural memory intact A comparative approach including the use of model systems seems to facilitate understanding of the molecular mechanisms that lead to AMI and AD We advocate research on model systems This eBook also provides the first manuscript co authored with an AD patient to create a

feedback loop from patients incorporated into research We also included a manuscript on the semi automated system that was inspired by such a feedback Those may place a nice flavor to this exciting series of comparative research on cognitive aging We hope you enjoy this eBook Warm regards Shin Murakami Ph D

The Cambridge Handbook of Cognitive Aging Ayanna K. Thomas, Angela Gutches, 2020-05-28 Decades of research have demonstrated that normal aging is accompanied by cognitive change Much of this change has been conceptualized as a decline in function However age related changes are not universal and decrements in older adult performance may be moderated by experience genetics and environmental factors Cognitive aging research to date has also largely emphasized biological changes in the brain with less evaluation of the range of external contributors to behavioral manifestations of age related decrements in performance This handbook provides a comprehensive overview of cutting edge cognitive aging research through the lens of a life course perspective that takes into account both behavioral and neural changes Focusing on the fundamental principles that characterize a life course approach genetics early life experiences motivation emotion social contexts and lifestyle interventions this handbook is an essential resource for researchers in cognition aging and gerontology

Casadesus,2011-07-05 Animals have been used to model diseases or test new treatments since around 300 BC and undoubtedly our ability to model disease in animals including transgenic animals has provided major breakthroughs in all fields of biomedical research Due to their complexity and plurality of pathology and symptomatology the study of neurodegenerative diseases relies heavily on animal models These models have been developed in many species in the attempt to uncover the complex nature of the disease mechanisms involved The ultimate goal is to test promising therapies and to manage prevent or cure neurodegenerative disease But because most animal models in this area do not reproduce the full phenotypical disease spectrum and the etiology and clinical presentation of neurodegenerative diseases differ from one patient to the next the testing of these diseases in animal models often translates poorly to indices of efficacy when applied to the clinical population Written by experts in the field with these advances and challenges in mind this handbook provides an updated overview of the animal models being developed and used to study complex disease dynamics The first part of the book presents an overview of animal models of various species and includes a review of new invertebrate animal models to study neurodegeneration The second section presents the use of animal models to pinpoint disease mechanisms and the last part of the handbook examines the various therapeutic interventions being used in models of neurodegenerative disease Handbook of Research on Adult Learning and Development M Cecil Smith,Nancy DeFrates-Densch, Assistant Editor,2008-11-19 The time is right for this comprehensive state of the art Handbook that analyzes integrates and summarizes theoretical advances and research findings on adult development and learning a rapidly growing field reflecting demographic shifts toward an aging population in Western societies Featuring contributions from prominent scholars across diverse disciplinary fields education developmental psychology public policy gerontology neurology public health sociology family studies and adult education the volume is organized around six themes theoretical perspectives on adult development and learning research methods in adult development research on adult development research on adult learning aging and gerontological research policy perspectives on aging The Handbook is an essential reference for researchers faculty graduate students and practitioners whose work pertains to adult and lifespan development and learning Neuroimaging Approaches to the Study of Cognitive Aging Ronald Cohen,Clinton B.
