Numerical Methods and Constitutive Modelling in Geomechanics Chandrakant S. Desai,Giancarlo Gioda,2014-05-04 The solution of stress analysis problems through numerical computer oriented techniques is becoming more and more popular in soil and rock engineering This is due to the ability of these methods to handle geometrically complex problems even in the presence of highly nonlinear material behaviour characterizing the majority of soils and rocks and of media consisting of two or more phases like saturated and partially saturated soils Aim of this book is to present to researchers and engineers working in the various branches of geomechanics an updated state of the research on the development and application of numerical methods in geotechnical and foundation engineering Particular attention is devoted to the formulation of nonlinear material models and to their use for the analysis of complex engineering problems In addition to the constitutive modelling other topics discussed concern the use of the finite element and boundary element methods in geomechanics the dynamic analysis of inelastic and saturated soils the solution of seepage consolidation and coupled problems the analysis of soil structure interaction problems the numerical procedures for the interpretation of field measurements the analysis of tunnels and underground openings **Numerical Analysis and Modelling in Geomechanics** John W. geomechanics existing design methods are very much dependent upon sophisticated on site techniques to assess ground conditions This book describes numerical analysis computer simulation and modelling that can be used to answer some highly complex questions associated with geomechanics The contributors who are all international experts in the field also give insights into the future directions of these methods Numerical Analysis and Modelling in Geomechanics will appeal to professional engineers involved in designing and building both onshore and offshore structures where geomechanical considerations may well be outside the usual codes of practice and therefore specialist advice is required Postgraduate researchers degree students carrying out project work in this area will also find the book an invaluable resource
