Ray Optics Fermats Principle And Applications To General Relativity:

Ray Optics, Fermat's Principle, and Applications to General Relativity Volker Perlick,2003-07-01 This book is about the mathematical theory of light propagation in media on general relativistic spacetimes The first part discusses the transition from Maxwell s equations to ray optics The second part establishes a general mathematical framework for treating ray optics as a theory in its own right making extensive use of the Hamiltonian formalism This part also includes a detailed discussion of variational principles i e various versions of Fermat s principle for light rays in general relativistic media Some applications e g to gravitational lensing are worked out The reader is assumed to have some basic knowledge of general relativity and some familiarity with differential geometry Some of the results are published here for the first time e g a general relativistic version of Fermat s principle for light rays in a medium that has to satisfy some regularity condition only

Einstein's Field Equations and Their Physical Implications Bernd G. Schmidt,2008-01-11 This book serves two purposes The authors present important aspects of modern research on the mathematical structure of Einstein s field equations and they show how to extract their physical content from them by mathematically exact methods The essays are devoted to exact solutions and to the Cauchy problem of the field equations as well as to post Newtonian approximations that have direct physical implications Further topics concern quantum gravity and optics in gravitational fields The book addresses researchers in relativity and differential geometry but can also be used as additional reading material for graduate students **Singularity Theory and Gravitational Lensing** Arlie O. Petters,Harold Levine,Joachim Wambsganss,2012-12-06 Astronomers do not do experiments They observe the universe primarily through detect ing light emitted by stars and other luminous objects Since this light must travel through space to reach us variations in the metric of space affects the appearance of astronomical objects These variations lead to dramatic changes in the shape and brightness of astronom ical sources Because these variations are sensitive to mass rather than to light observations of gravitational lensing enable astronomers to probe the mass distribution of the universe With gravitational lensing observations astronomers are addressing many of the most important scientific questions in astronomy and physics What is the universe made of Most of the energy and mass in the universe is not in the form of luminous objects Stars account for less than 1 % of the energy density of the universe Perhaps as much as another 3% of the energy density of the universe is in the form of warm gas that fills the space between galaxies The remaining 96% of the energy density is in some yet unidentified form Roughly one third of this energy density of the universe is dark matter matter that clusters gravitationally but does not emit light Most cosmologists suspect that this dark matter is composed of weakly interacting subatomic particles However most of the energy density of the universe appears to be in an even stranger form energy associated with empty space **Null Curves and Hypersurfaces of Semi-Riemannian Manifolds** Krishan L. Duggal,Dae Ho Jin,2007 This is a first textbook that is entirely focused on the up to date developments of null curves with their applications to science and engineering It

fills an important gap in a second level course in differential geometry as well as being essential for a core undergraduate course on Riemannian curves and surfaces The sequence of chapters is arranged to provide in depth understanding of a chapter and stimulate further interest in the next The book comprises a large variety of solved examples and rigorous exercises that range from elementary to higher levels This unique volume is self contained and unified in presenting A systematic account of all possible null curves their Frenet equations unique null Cartan curves in Lorentzian manifolds and their practical problems in science and engineering The geometric and physical significance of null geodesics mechanical systems involving curvature of null curves simple variation problems and the interrelation of null curves with hypersurfaces

on the topic of t bulence in magnetized astrophysical environments A second objective was to discuss the latest generation of numerical codes such as those using adaptive mesh re nement AMR techniques During a plenary discussion at the end of the workshop discussions were held on several topics often at the heart of vivid controversies Topics included the timescale for the dissipation of magneto hydrodynamical MHD turbulence the role of boundary conditions the characteristics of imbalanced turbulence the validity of the polytropic approach to Alfv en waves support within interst lar clouds the source of turbulence inside clouds devoid of stellar activity the timescale for star formation the Alfv en Mach number of interstellar gas motions the formation process for helical elds in the interstellar medium The impact of small upon large scales was also discussed **Modified and Quantum Gravity** Christian Pfeifer,Claus Lämmerzahl,2023-09-30 This book discusses theoretical predictions and their comparison with experiments of extended and modified classical and quantum theories of gravity The goal is to provide a readable access and broad overview over different approaches to the topic to graduate and PhD students as well as to young researchers The book presents both theoretical and experimental insights and is structured in three parts The first addresses the theoretical models beyond special and general relativity such as string theory Poincare gauge theory and teleparallelism as well as Finsler gravity In turn the second part is focused on the observational effects that these models generate accounting for tests and comparisons which can be made on all possible scales from the universe as a whole via binary systems stars black holes satellite experiments down to laboratory experiments at micrometer and smaller scales The last part of this book is dedicated to quantum systems and gravity showing tests of classical gravity with quantum systems and coupling of quantum matter and gravity *Exact Solutions and Scalar Fields in Gravity* Alfredo Macías,Jorge L. Cervantes-Cota,Claus Lämmerzahl,2001-08-31 Here quantum and cosmological effects which arise from both gravity theories in four and higher dimensions and from metric affine theories are investigated Part Three is devoted to cosmological and inflationary scenarios Local effects such as the influence of scalar fields in protogalactic interactions numerical studies of the collapse of molecular cores as well as the inverse inflationary problem and the blue eigenvalue spectrum of it are considered Moreover the role of scalar fields as dark matter and quantum cosmology in the Bergman Wagoner and Gowdy theories together with the relation of the conformal symmetry and deflationary gas universe are likewise presented The last part of the book includes some mixed topics which are still in the experimental stage General Relativity Norbert Straumann,2013-11-11 The foundations are thoroughly developed together with the required mathematical background from differential geometry developed in Part III The author also discusses the tests of general relativity in detail including binary pulsars with much space is devoted to the study of compact objects especially to neutron stars and to the basic laws of black hole physics This well structured text and reference enables readers to easily navigate through the various sections as best matches their backgrounds and perspectives whether mathematical physical or astronomical Very applications oriented the text includes very recent results such as the supermassive black hole in our galaxy and first double pulsar system
