Reaching Port:

Egypt Karl Baedeker (Firm),1898 **Four Years in British Columbia and Vancouver Island** Richard Charles Mayne,1862 Canada ; Past, Present and Future William Henry Smith,1851 Port Systems in Global Competition César Ducruet,Theo Notteboom,2023-08-11 In a world where most international trade is carried by sea each port can be seen as a unique chokepoint competing to attract ever more traffic and economic activities However ports can also be seen as parts of a wider system which can be defined as a system of two or more ports located in proximity within a given area Their fate and governance is jointly influenced when belonging to the same region country or transnational space Investments shocks innovations and delays occurring in one port often affect other ports within a certain spatial range and time lapse Further understanding of such co developments in port systems is necessary to go beyond local specificities through a multidisciplinary and multi level contribution Port Systems in Global Competition is an answer to the strong and urgent need for reviewing the relevant theories concepts methods and sources that can be mobilized for the analysis of port systems With contributions from reputable scholars coming from no less than 11 countries in Europe Asia and North America this book delves into the analysis of port systems from diverse disciplinary angles geography regional science economics management engineering and mathematics computer sciences and covering innovative empirical approaches to various port systems in the world The theoretical and empirical knowledge can support and enhance decision making in relation with the development of ports supply chains and transport networks in general This book is an ideal companion to academics and upper level students interested in the analysis of transport and economic systems in general as well as the effective ways to answer complex issues in transportation and socio economic development It will be a valuable resource for those researching or studying transportation and supply chains maritime and port economics as well as regional development and human geography

Microwave Integrated Circuits Hee-Ran Ahn, 2006-07-14 This book examines the new and important technology of asymmetric passive components for miniaturized microwave passive circuits. The asymmetric design methods and ideas set forth by the author are groundbreaking and have not been treated in previous works. Readers discover how these design methods reduce the circuit size of microwave integrated circuits and are also critical to reducing the cost of equipment such as cellular phones, radars, antennas, automobiles, and robots. An introductory chapter on the history of asymmetric passive components, which began with asymmetric ring hybrids first described by the author, sets the background for the book. It lays a solid foundation with a chapter examining microwave circuit parameters such as scattering, ABCD impedance, admittance, and image. A valuable feature of this chapter is a conversion table between the various circuit matrices characterizing two-port networks terminated in arbitrary impedances. The correct conversion has also never been treated in previous works. Next, the author sets forth a thorough treatment of asymmetric passive component design, which covers the basic and indispensable elements for integration with other active or passive devices, including Asymmetric ring hybrids, Asymmetric branch line hybrids, Asymmetric three-port power dividers, and N-way power dividers, Asymmetric ring hybrid phase shifters, and attenuators, Asymmetric ring filters, and asymmetric impedance transformers. With its focus on the principles of circuit element design, this is a must-have graduate-level textbook for students in microwave engineering as well as a reference for design engineers who want to learn the new and powerful design method for asymmetric passive components. **Northern Guide** Zadock Thompson, 1857 **Africa's Transport Infrastructure** Heinrich Bofinger, 2011-01-01 This book will be of interest to governments in the region and to multilateral and bilateral aid and lending agencies as well as to graduate students, faculty, and researchers in African studies and transport studies. Book Jacket The EU Maritime Safety Policy and International Law Henrik Ringbom, 2008-09-30 This book offers a comprehensive international law analysis of the European Union's maritime safety legislation. This is a relatively novel field of activity of the EU, but its development has been very rapid. Since 1993, over 40 acts of EU law have been adopted dealing with a variety of subjects such as port State control, classification societies, vessel traffic management, ship construction, environmental protection, and pollution sanctions. This legislation is analysed from the point of international law, notably the law of the sea and the international maritime conventions. Regional legislation in a field that is traditionally regulated primarily by means of international conventions is bound to create tensions with the related international conventions and with well-established principles of international law. This study assesses how the EU has acted as a flag State, port State, and coastal State and measures the trends in this development against the international legal framework. More detailed legal analyses are offered for specific aspects of EU legislation that are considered to be particularly interesting from an international law point of view. The relationship between EU law and international law within the internal EU legal system is also analysed from the specific perspective of maritime safety law. **The Transportation of Alaskan Natural Gas** United States.
