Complex Engineering Problem

A part of grim economic outlook of Pakistan comes from huge trade deficit i.e. spending high on imports as compared to the earnings from exports. Our annual exports during July – March, 2020 - 2021 totalled \$ 18,688 million while import of different commodities worth \$ 39,519 million was recorded from July – March, 2020 – 2021. These imports include several chemicals which can be produced locally to lessen the burden on our national exchequer. Young and talented chemical engineers should come up with design solutions to start their own business of producing chemicals.

A complete list of imported commodities is available at the website of Pakistan Bureau of Statistics (Link below). Choose one of the chemicals, consider different routes of its production and select one route while keeping in mind the 'twelve principles of green chemistry'. Choose a reasonable production capacity, find kinetics of the reactions from literature and design all the reactors involved. Look at the conversions in each reactor, find out if the conversions are limited by Thermodynamics or Kinetics. Think about different ways to enhance the conversion and productivity. Prepare a report and submit for evaluation.
