A stepwise approach to problem-solving in organic chemistry

MARK G. MOLONEY

Alcohols are nucleophiles, the oxygen possesses lone pairs, strong acid, and fully ionized ( $pK_a = -10$ )

The intermediate product can be converted to the final product by tautomerization. This can be catalyzed by any available acid or base.

The combination  $\text{NaNO}_2/\text{HCl}$  generates  $\text{HONO}$  (nitrous acid), which is in equilibrium with  $\text{N}_2\text{O}_3$ , a source of  $\text{O}=\text{N}-\text{N}=\text{O}$ . This reagent deactivates the amine functional group.

Summary: An ester reacts with 2 equivalents of organotin to

Alcohols are nucleophiles and bases, since the oxygen possesses lone pairs.  $\text{H}^+$  is a strong acid, and fully ionized ( $pK_a = -10$ )

Ketones are more reactive than esters, due to the stabilizing resonance delocalization in the ester, and the nitrogen on  $\text{H}_2\text{N}-\text{OH}^+$  hydroxylamine is more nucleophilic than oxygen, since nitrogen is less electronegative.

Label intermediates and reagents, and consider the order of the starting material and reagent.

Make the most reactive bond, if more than one exists.

Identify the characteristic reagents of the most reactive functional group, by considering the reaction conditions, which select the most appropriate.

forms of racialized seeing as they pertain to nineteenth century Black life and racial hierarchies the sentimental gaze and the slave trader's glance highlighting the life and death stakes of both looking anyone squarely in the eye and looking away Emily Dickinson's certain slant of light syntactical oddities and her stitching of scraps and fragments into the fascicles that constitute her corpus all derive from a commitment to contingency the ungrounded life's only defense against the abyss of non being Tavlin investigates as well Henry James's vexed but entirely dependent relationship to literary and painterly impressionism and William Carlos Williams's imagist poetics as a response to early cinema's use of the cut as the basis for a new visual grammar Each of these literary artists Tavlin argues via their own distinctive sensibilities and the artistic or technological counterparts that informed them refuse the authoritative all possessive gaze in favor of the glance a mode of seeing thinking and being that made way for what we now think of as commonplace namely modernity
