Braganza, 1991 The second half of this century has been marked by the evolution of specialties in some branches of medicine of which gastro enterology has proved one of the more vigorous and successful The development of intricate diagnostic and therapeutic techniques has fostered a tendency to overspecialization In the past decade there has been a move to broaden the outlook Workers who study the exocrine pancreas both scientific and clinical are now concerned not only with the endocrine pancreas but the liver and biliary tract as well because of the close embryological anatomical and physiological relationships of the pancreas with these organs

Guthrie, Jr., Brooke T. Mossman, 2018-12-17 Volume 28 of Reviews in Mineralogy provides some of the necessary tools for the researcher interested in this area of interdisciplinary research The chapters present several of the important problems concepts and approaches from both the geological and biological ends of the spectrum These two extremes are partially integrated throughout the book by cross referencing between chapters Chapter 1 also presents a general introduction into the ways in which these two areas overlap However many of the areas ripe for the interdisciplinarian will become obvious

after reading the various chapters The final chapter of this book discusses some of the regulatory aspects of minerals Ultimately the regulatory arena is where this type of interdisciplinary approach can make an impact and hopefully better communication between all parties will accomplish this goal A glossary is included at the end of this book because the complexity of scientific terms in the two fields can thwart even the most enthusiastic of individuals This volume represents the proceedings of a course by the same title held at Harbor House Resort and Conference Center on Nantucket Island off the coast of Massachusetts October 22-24 1993
