scientist Charles DeLisi tells the story of the rewards and frustrations of a life in science The memoir spans half a century beginning in grade school when we find a somewhat shy boy deeply affected by the profoundly saddening sight of trees and woods in his beloved Bronx neighborhood being displaced by tons of steel and concrete The reader is taken inside the mind of a complex non conformist as he struggles with personal tragedy and ambivalence and moves from physics to history back to physics and eventually into a career as a biomedical scientist Among the most important parts of the memoir are his personal recollections of the years as director of the Department of Energy s Health and Environmental Research Programs when he fought the mighty battles that would move two Federal Agencies and place the Human Genome Project including a unique ethical component on the National Agenda We watch an uncannily successful strategist and leader who sees himself as an ordinary person distinguished only by an intense passion for science as he and his colleagues successfully engage Congressmen his superiors at the DOE and scientists of different backgrounds The story closes where it began with environmental change dominating the emotional landscape as he and his colleagues struggle to fight the battle against a changing climate

Hidden Histories of Science Robert B. Silvers,1995 We often think of science as continuously advancing In this collection of essays five world renowned writers explore obscure and neglected episodes in the history of science which suggest instead that the process of understanding the significance of scientific discoveries can be erratic contradictory even irrational Jonathan Miller Oliver Sacks and Daniel Kevles show how promising new ideas may at first fail to be noticed or accepted and then years after they have been dismissed or forgotten are recognized in a different form as important R C Lewontin and Stephen Jay Gould discuss the ways that words and images used by scientists and popularizers alike from the murals on the walls of natural history museums to such ubiquitous terms as adaptation and environment reflect serious and often unacknowledged distortions in the way we conceive of both individual organisms and the natural history of the world These essays demonstrate that science is in the words of Oliver Sacks a human enterprise through and through an organic evolving human growth with sudden spurts and arrests and strange deviations too It grows out of its past but never outgrows it any more than we outgrow our childhood
