Los Alamos Wildfires Wildfires Environmental Disasters Milwaukee Wis:

Los Alamos Wildfires Nichol Bryan, 2003-07 The massive wildfire racing down a mountain toward a nuclear research center in New Mexico wasn't caused by carelessness. It was deliberately set by the U.S. National Park Service on May 4, 2000 as a controlled burn to prevent future forest fires. Instead, it quickly blazed out of control, destroying acres of forests, consuming homes, and causing the evacuation of Los Alamos and other cities. Learn how firefighters worked to contain this environmental disaster and see why fire control remains a controversial practice. Book jacket *Facts on File World News Digest Yearbook*, 2000 Library Journal Melvil Dewey, Richard Rogers Bowker, L. Pylodet, Charles Ammi Cutter, Bertine Emma Weston, Karl Brown, Helen E. Wessells, 2007 Includes beginning Sept 15, 1954 and on the 15th of each month Sept-May a special section. School library journal. ISSN 0000-0035 called Junior Libraries, 1954-May 1961. Also issued separately.

Who's Who in America Marquis Who's Who, Inc., 2002 **Inferno by Committee** Tom Ribe, 2010-05-12 Tom Ribe's clear, scrupulous and thorough account of the Los Alamos Bandelier fire of 2000 is a white-knuckle narrative yet meticulously accurate. Roger G. Kennedy, former director of the U.S. National Park Service, director emeritus of the National Museum of American History, Smithsonian Institution, and author of *Wildfire and Americans*. **Inferno by Committee** tells the story of America's worst prescribed fire disaster, the Cerro Grande Fire of 2000, which burned 250 homes in Los Alamos, New Mexico. The fire started with a National Park Service prescribed fire that went out of control and ended up burning 42,000 acres of the Santa Fe National Forest. A thorough review of the investigations of the fire and the policy changes that resulted from this seminal event in American fire history are also an integral part of this examination. Prescribing fire on the landscape involves risk. Sometimes, as with the Cerro Grande Fire, the risk taken results in disaster. For land managers, there really is no option but to prescribe fire and take risk to restore fire to a landscape where fire is native and necessary for the survival of biological systems. Cerro Grande showed us both the consequences of taking a risk with fire and, more dramatically, the consequences of avoiding that risk. **Inferno by Committee** Tom Ribe, 2010 Tom Ribe's clear, scrupulous and thorough account of the Los Alamos Bandelier fire of 2000 is a white-knuckle narrative yet meticulously accurate.  Barry Thomas Hill,2000 **Fire management lessons learned from the Cerro Grande (Los Alamos) fire** , *Fire Management: Lessons Learned From the Cerro Grande (Los Alamos) Fire and Actions Needed to Reduce Fire Risks* ,2000 We are here today to discuss two related issues lessons learned from the recent Cerro Grande fire and on a broader note actions needed to mitigate current hazardous forest conditions in the interior West Only a few months ago the Los Alamos fire now officially known as the Cerro Grande fire caused hundreds of families in Los Alamos New Mexico to lose their homes and more than 18 000 residents of the state to be evacuated Over 1 000 fire fighters were required to bring the fire under control Estimates have placed total damages at about 1 billion This tragedy was the result of a prescribed fire ignited by officials of the National Park Service Ironically the fire was ignited in an effort to reduce some of the vegetative buildup in a forested area of Bandelier National Monument and thus help prevent the very kind of event that occurred The plan was to burn up to 900 acres in the end about 48 000 acres were burned The policy supporting the use of prescribed or controlled burns as a forest management tool has been in place for some time According to analyses by federal land management agencies the use of prescribed burns has been and will continue to be a critical component of forest management if the nation wants to reduce the risk of catastrophic wildfires particularly in the interior West The need to reduce these risks has never been more obvious as it as at this time While the Cerro Grande fire demonstrated this as events have unfolded it was only the beginning of what has turned out to be one of the worst wildfire seasons in history with over 4 million acres already burned and dozens of fires still burning in many western states In reviewing the events surrounding the Cerro Grande fire we examined how well the policy was implemented and what if any lessons can be learned to prevent future tragedies like it **Environment**

W. Koch,R. G.Balice,2004 To support efforts to protect facilities and property at Los Alamos National Laboratory from damages caused by wildfire we completed a multiyear project to develop a system for modeling the behavior of wildfires in the Los Alamos region This was accomplished by parameterizing the FARSITE wildfire behavior model with locally gathered data representing topography fuels and weather conditions from throughout the Los Alamos region Detailed parameterization was made possible by an extensive monitoring network of permanent plots weather towers and other data collection facilities We also incorporated a database of lightning strikes that can be used individually as repeatable ignition points or can be used as a group in Monte Carlo simulation exercises and in other randomization

procedures The assembled modeling system was subjected to sensitivity analyses and was validated against documented fires including the Cerro Grande Fire The resulting modeling system is a valuable tool for research and management It also complements knowledge based on professional expertise and information gathered from other modeling technologies However the modeling system requires frequent updates of the input data layers to produce currently valid results to adapt to changes in environmental conditions within the Los Alamos region and to allow for the quick production of model outputs during emergency operations

Implications of the California Wildfires for Health, Communities, and Preparedness National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Board on Health Sciences Policy, Roundtable on Environmental Health Services, Research, and Medicine, Roundtable on the Promotion of Health Equity, Roundtable on Population Health Improvement, Forum on Medical and Public Health Preparedness for Disasters and Emergencies, 2020-08-31 California and other wildfire prone western states have experienced a substantial increase in the number and intensity of wildfires in recent years Wildlands and climate experts expect these trends to continue and quite likely to worsen in coming years Wildfires and other disasters can be particularly devastating for vulnerable communities Members of these communities tend to experience worse health outcomes from disasters have fewer resources for responding and rebuilding and receive less assistance from state local and federal agencies Because burning wood releases particulate matter and other toxicants the health effects of wildfires extend well beyond burns In addition deposition of toxicants in soil and water can result in chronic as well as acute exposures On June 4 5 2019 four different entities within the National Academies of Sciences Engineering and Medicine held a workshop titled Implications of the California Wildfires for Health Communities and Preparedness at the Betty Irene Moore School of Nursing at the University of California Davis The workshop explored the population health environmental health emergency preparedness and health equity consequences of increasingly strong and numerous wildfires particularly in California This publication is a summary of the presentations and discussion of the workshop

In Fire's Way Tom Wolf, 2003-01-24 A fire fighting tool for homeowners and firefighters alike this guide discusses both the properties of wildfires and ways to minimize damage Authored by an environmental journalist with advanced degrees in forestry it is a must have book designed to help westerners understand the Wildfire Danger Zone

Proposed Future Disposition of Certain Cerro Grande Fire Flood and Sediment Retention Structures at Los Alamos National Laboratory, Los Alamos, New Mexico, 2002 This environmental assessment EA has been prepared to analyze the environmental consequences resulting from the future disposition of certain flood retention structures built in the wake of the Cerro Grande Fire within the boundaries of Los Alamos National Laboratory LANL In May 2000 a prescription burn started on Federally administered land to the northwest of LANL blew out of control and was designated as a wildfire This wildfire which became known as the Cerro Grande Fire burned approximately 7 650 acres 3 061 hectares within the boundaries of LANL before it was

extinguished During the fire a number of emergency actions were undertaken by the Department of Energy DOE National Nuclear Security Administration NNSA to suppress and extinguish the fire within LANL immediately thereafter NNSA undertook additional emergency actions to address the post fire conditions Due to hydrophobic soils non permeable soil areas created as a result of very high temperatures often associated with wild fires and the loss of vegetation from steep canyon sides caused by the fire surface runoff and soil erosion on hillsides above LANL were greatly increased over prefire levels The danger to LANL facilities and structures and homes located down canyon from the burned area was magnified
