traducidos al idioma Español Mary C. Turner, 1983 *La comunicación sin palabras* Blas Gómez Gómez, Antonio Herranz, 2011-10 El uso de la información que se genera en los sistemas de comunicación no verbal es esencial para comprender el desenlace de muchos procesos comunicativos. Aunque para algunos represente una cuestión anecdótica, lo cierto es que nos atraen las personas que presentan una posición facial positiva o las que mantienen mientras nos hablan los hombros alineados y ligeramente adelantados, transmitiendo que contamos con toda su atención. También la distancia entre los interlocutores o el movimiento de brazos con el que damos ritmo a nuestro discurso forman parte del mensaje. En este libro Blas Gómez y Antonio Herranz presentan la interpretación de un gran número de gestos y señales no verbales que han pasado desapercibidos y proponen una serie de rutinas comunicacionales que aprovechan los procesos de retroalimentación y adaptación que se producen en cualquier proceso de comunicación para mejorar su eficacia. El modelo GOHE que describen los autores complementa los actuales modelos comunicacionales sistematizando de forma pragmática los canales y las señales de comunicación no verbal. La estructura y relación del modelo GOHE con el desarrollo natural de cualquier proceso comunicativo le ayudará a aprovechar todo su potencial y con su aplicación obtendrá una mejora en la consecución de sus objetivos comunicacionales y un paso de gigante en su desempeño profesional y social.

Handbook of Latin American Health Psychology Alfonso Urzúa, Yarimar Rosa-Rodríguez, 2025-07-26 This handbook presents a comprehensive overview of a tradition of psychological research and practice little known in the English speaking world: the Latin American school of health psychology. Even though health psychology as a field of research and practice was born in Latin America with the creation of the National Group of Health Psychology within the Cuban Ministry of Public Health in 1969, this genesis is seldom acknowledged in the international literature. And even less is known on an international level about the original contributions that Latin American health psychologists have made and still make to the development of the discipline. This volume aims to fill this gap by presenting to the international community a comprehensive account of the particular trajectory of health psychology in Latin America and the original contributions made by a field of research and practice that has always tried to integrate a socio-culturally sensitive approach to develop studies and interventions in health promotion.

and disease prevention This is done by bringing together chapters written by leading experts from the region that explain the specific social political and cultural contexts in which health psychology developed in Latin America present the original theoretical and methodological approaches developed by Latin American health psychologists and provide an overview of current research done in the region about the contribution of psychology to the management of various health conditions The Handbook of Latin American Health Psychology will be of interest to researchers practitioners and students interested in the internationalization and cross cultural generalizability of health psychology as a tool for building a truly global and culturally sensitive discipline Some chapters of this handbook were originally written in Spanish and translated into English with the help of artificial intelligence A subsequent human revision was done primarily in terms of content
