Ruth Leys, 2020-07-30 Newborn imitation has recently become the focus of a major controversy in the human sciences New studies have reexamined the evidence and found it wanting Imitation has been regarded as a crucial capability of neonates ever since 1977 when two American psychologists first published experiments appearing to demonstrate that babies at birth are able to copy a variety of facial movements The findings overturned decades of assumptions about the competence of newborns But what if claims for newborn imitation are not true Influential theories about the mechanisms underlying imitation the role of mirror neurons the nature of the self and of infant mental states will all have to be modified or abandoned if it turns out that babies cannot imitate at birth This Element offers a critical assessment of those theories and the stakes involved

Introduction to Theories of Learning Matthew H. Olson, Julio J. Ramirez, 2020-02-07 Since its first edition *An Introduction to Theories of Learning* has provided a uniquely sweeping review of the major learning theories from the 20th century that profoundly influenced the field of psychology. In this tenth edition the authors present further experimental evidence that tests many of the fundamental ideas presented in these classic theories as well as explore many of the advances in psychological science and neuroscience that have yielded greater insight into the processes that underlie learning in human beings and animals. The four main goals of this text are to define learning and to show how the learning process is studied. Chapters 1 and 2 to place learning theory in historical perspective. Chapter 3 and to present essential features of the major theories of learning with implications for educational practices. Chapters 4 through 16. The authors retained the best features of earlier editions while making revisions that reflect current research and scholarship including coverage of active learning and the testing effect, information for problem solving in ravens, data illustrating the neurobiological basis of the cognitive map and spatial learning, new research on brain plasticity and its role in learning as well as the impact of poverty on brain and cognitive development and new evidence that challenges the notion of learning styles. Complete with chapter summaries, discussion questions and a glossary, this text is essential reading for theories of learning and applied cognitive psychology courses. See Support Material below for new online resources. Instructor resources include PowerPoint slides and a testbank containing over 500 questions in both Microsoft Word and GIFT file formats. Student resources include chapter summaries, discussion questions and a glossary of key terms.

An Odyssey in Learning and Perception Eleanor J. Gibson, 1994-02-03 *An Odyssey in Learning and Perception* documents a fifty year intellectual expedition in the areas of learning and perception, always with an eye to combining them in a theory of perceptual learning and development, a theory that may be broadly applicable to humans and nonhumans, young and old. In the field of psychology, beginning in the 1950s, Eleanor J. Gibson nearly single handedly developed the field of perceptual learning with a series of brilliant studies that culminated in the seminal work *Perceptual Learning and Development*. *An Odyssey in Learning and Perception* brings together Gibson's scientific papers, including difficult to find or previously unpublished work, along with classic studies in perception and action. Gibson introduces each paper to show why the research was undertaken and concludes each section with comments linking the findings to later developments. A personal essay touches on the questions and concerns that guided her research.
