Raw Materials of Industrialism Hugh Baxter Killough, Lucy Winsor Killough, 1929 **The Response to Industrialism, 1885-1914** Samuel P. Hays, 1995-11 In this new edition Samuel P Hays expands the scope of his pioneering account of the ways in which Americans reacted to industrialism during its early years from 1885 to 1914 Hays now deepens his coverage of cultural transformations in a study well known for its concise treatment of political and economic movements Hays draws on the vast knowledge of America's urban and social history that has been developed over the last thirty eight years to make the second edition an unusually well rounded study He enhances the original coverage of politics labor and business with new accounts of the growth of cities the rise of modern values cultural conflicts with Native Americans and foreign nations and changing roles for women African Americans education religion medicine law and leisure The result is a tightly woven portrait of America in transition that underscores the effects of impersonal market forces and greater personal freedom on individuals and chronicles such changes as the rise of social inequality shifting power in the legal system the expansion of the federal government and the formation of the Populist Progressive and Socialist parties **Vernacular Industrialism in China** Eugenia Lean, 2020-03-17 In early twentieth century China Chen Diexian 1879 1940 was a maverick entrepreneur at once a prolific man of letters and captain of industry a magazine editor and cosmetics magnate He tinkered with chemistry in his private studio used local cuttlefish to source magnesium carbonate and published manufacturing tips in how to columns In a rapidly changing society Chen copied foreign technologies and translated manufacturing processes from abroad to produce adaptations of global commodities that bested foreign brands Engaging in the worlds of journalism industry and commerce he drew on literati practices associated with late imperial elites but deployed them in novel ways within a culture of educated tinkering that generated industrial innovation Through the lens of Chen's career Eugenia Lean explores how unlikely individuals devised unconventional homegrown approaches to industry and science in early twentieth century China She contends that Chen's activities exemplify vernacular industrialism the pursuit of industry and science outside of conventional venues often involving ad hoc forms of knowledge and material work Lean shows how vernacular industrialists accessed worldwide circuits of law and science and experimented with local and global processes of manufacturing to navigate innovate and compete in global capitalism In doing so they presaged the approach that has helped fuel China's economic ascent in the twenty first century Rather than conventional narratives that depict China as belatedly borrowing from Western technology Vernacular Industrialism in China offers a new understanding of industrialization going beyond material factors to show the central role of culture and knowledge production in technological and industrial change
