

# Gravitation Universelle

La loi de gravitation :

Interaction gravitationnelle

Interaction attractive entre deux objets massiques.

deux objets massiques (qui ont une masse) quelles que soient, exercent l'un sur l'autre une **action massique attractive**.

Entre deux objets massiques, il existe une interaction attractive due à la gravitation.

Loi de gravitation.

Deux objets A et B, de masses respectives  $m_A$  et  $m_B$ , dont les centres sont séparés par une distance  $d$ , exercent l'un sur l'autre des actions massiques attractives mesurées par des forces ayant la même intensité :

$$F = G \times \frac{m_A m_B}{d^2}$$

$N$   
(newton)

G est appelée constante de gravitation universelle.

**Thermodynamics, cosmical and geological physics, molecular and crystalline theory, electrodynamics** William Thomson Baron Kelvin,1911     **3+1 Formalism in General Relativity** Éric Gourgoulhon,2012-02-27 This graduate level course based text is devoted to the 3 1 formalism of general relativity which also constitutes the theoretical foundations of numerical relativity The book starts by establishing the mathematical background differential geometry hypersurfaces embedded in space time foliation of space time by a family of space like

hypersurfaces and then turns to the 3 1 decomposition of the Einstein equations giving rise to the Cauchy problem with constraints which constitutes the core of 3 1 formalism The ADM Hamiltonian formulation of general relativity is also introduced at this stage Finally the decomposition of the matter and electromagnetic field equations is presented focusing on the astrophysically relevant cases of a perfect fluid and a perfect conductor ideal magnetohydrodynamics The second part of the book introduces more advanced topics the conformal transformation of the 3 metric on each hypersurface and the corresponding rewriting of the 3 1 Einstein equations the Isenberg Wilson Mathews approximation to general relativity global quantities associated with asymptotic flatness ADM mass linear and angular momentum and with symmetries Komar mass and angular momentum In the last part the initial data problem is studied the choice of spacetime coordinates within the 3 1 framework is discussed and various schemes for the time integration of the 3 1 Einstein equations are reviewed The prerequisites are those of a basic general relativity course with calculations and derivations presented in detail making this text complete and self contained Numerical techniques are not covered in this book      **Bulletin astronomique** ,1924

Advances in Microlocal Analysis H.G. Garnir,2012-12-06 The 1985 Castel vecchio Pascoli NATO Advanced Study Institute is aimed to complete the trilogy with the two former institutes I organized Boundary Value Problem for Evolution Partial Differential Operators Liege 1976 and Singularities in Boundary Value Problems Maratea 1980 It was indeed necessary to record the considerable progress realized in the field of the propagation of singularities of Schwartz Distributions which led recently to the birth of a new branch of Mathematical Analysis called Microlocal Analysis Most of this theory was mainly built to be applied to distribution solutions of linear partial differential problems A large part of this institute still went in this direction But on the other hand it was also time to explore the new trend to use microlocal analysis In non linear differential problems I hope that the Castelvecchio NATO ASI reached its purposes with the help of the more famous authorities in the field The meeting was held in Tuscany Italy at Castelvecchio Pascoli little village in the mountains north of Lucca on September 2 12 1985 It was hosted by 11 Ciocco an international vacation Center In a comfortable hotel located in magnificent mountain surroundings and provided with all conference and sport facilities      *Celestial Mechanics* Pierre Simon marquis de Laplace,Nathaniel Bowditch,1966      *Gravity's Shadow* Harry Collins,2010-08-15 According to the theory of relativity we are constantly bathed in gravitational radiation When stars explode or collide a portion of their mass becomes energy that disturbs the very fabric of the space time continuum like ripples in a pond But proving the existence of these waves has been difficult the cosmic shudders are so weak that only the most sensitive instruments can be expected to observe them directly Fifteen times during the last thirty years scientists have claimed to have detected gravitational waves but so far none of those claims have survived the scrutiny of the scientific community Gravity's Shadow chronicles the forty year effort to detect gravitational waves while exploring the meaning of scientific knowledge and the nature of expertise Gravitational wave detection involves recording the collisions explosions and trembling of stars and black holes by evaluating

the smallest changes ever measured Because gravitational waves are so faint their detection will come not in an exuberant moment of discovery but through a chain of inference for forty years scientists have debated whether there is anything to detect and whether it has yet been detected Sociologist Harry Collins has been tracking the progress of this research since 1972 interviewing key scientists and delineating the social process of the science of gravitational waves Engagingly written and authoritatively comprehensive Gravity's Shadow explores the people institutions and government organizations involved in the detection of gravitational waves This sociological history will prove essential not only to sociologists and historians of science but to scientists themselves
